EXECUTIVE SUMMARY

PPM Consultants, Inc. (PPM) was retained by Union County, Florida to conduct a Phase I Environmental Site Assessment (ESA) of the Tomahawk Parcel 1 (the subject property) located at the northeast corner of Highway 121 and Highway 100 Lake Butler, Florida. The purpose of this assessment was to identify recognized environmental conditions in connection with the subject property by means of interviews, review of record information, and site reconnaissance. The environmental assessment was conducted in conformance with the scope of ASTM International Standard Practice E 1527-21.

PPM conducted the site reconnaissance on April 12, 2023. The subject property is made up of one parcel totaling approximately 35 acres in size. The subject property consists of heavily wooded vacant land. The current owner of the subject property is Tomahawk II LLC.

The earliest historical record for the subject property includes an aerial photograph from 1938. The subject property is vacant with the exception of two dirt roads that join in the south-central area and run from east to west. The 1958 aerial photograph is similar with the exception of another wider road shown running north to south in the western portion of the subject property. By 1964, the subject property shows heavier vegetation throughout the subject property and another road along the southern-most property line. By 1978, the subject property is completely covered by trees but the roads running north to south and east to west are visible in the tree lines. The 1987 aerial shows all the dirt roads, with the exception of the southern-most road to be overgrown and not defined. The 1999 aerial photograph shows no traces of the dirt roads on the subject property with the exception of the southern-most road. By 2005, the subject property is similar to the present-day configuration. Currently site access is limited to a short dirt road that enters the subject property from the east for a distance of approximately 100 yards. All other areas are heavily wooded.

In 1938, all adjoining properties consist of cleared or wooded vacant land. The first development of adjoining properties is seen on the 1958 aerial photograph that shows some smaller residential or office buildings adjoining to the southwest. The 1971 aerial photograph shows a residential home adjoining to the north of the subject property. By 1981, the smaller buildings adjoining to the southwest have been demolished and one larger commercial building remains. Aerial photographs remain similar until 1995 when another commercial building appears to the southwest of the subject property and some smaller residential homes appear in the cleared land to the east of the subject property,

which is currently a cattle ranch. The first available city directory listing in 1998 confirms the commercial property adjoining to the southwest (1205 East Main Street) to be Hardee's fast food restaurant. The 2008 city directory lists one of the properties adjoining to the southwest across Highway 100 (1210 East Main Street) as a residential home. The historical aerial photographs and city directories for adjoining properties remain similar after 2008 until the last historical record in 2022.

The surrounding properties have historically consisted of vacant and residential properties to the north, east, and south of the subject property. The surrounding area to the west of the subject property was first developed for commercial and residential land in the early 1970s according to aerial photographs.

This assessment has revealed no evidence of RECs, CRECs, and/or SDGs in connection with the subject property.

1.0 INTRODUCTION

1.1 PROPERTY IDENTIFICATION

Property Name:	Tomahawk Parcel 1		
Current Property Owner:	Tomahawk II LLC		
Current Property Use:	Vacant		
Land Area in Acres:	35		
Street Address:	Northeast corner of Highway 121 and Highway 100		
County/Parish:	Union		
City, State, Zip Code:	Lake Butler, Florida, 32054		
UTM Coordinates:	30° 1' 24.20" N	Latitude	82° 19' 20.28" W Longitude
Tax Parcel ID(s):	29-05-20-00-000-0390-0		
Date of Site Visit:	April 12, 2023		
Attachments:	Subject property location is shown in Figure 1, Site Location Map, Appendix A, Figures . Photographs of property are provided in Appendix C .		
	Subject property is shown on Figure 2, Site Map, Appendix A, Figures . Subject property and adjoining properties are shown on Figure 3, Area Map, Appendix A, Figures .		
	Legal description (if obtained) is provided in Appendix F, Other Documentation .		

1.2 PURPOSE

PPM Consultants, Inc. (PPM) was retained by Union County, Florida, the client/primary user, to conduct a Phase I Environmental Site Assessment (ESA) of the above referenced property in accordance with ASTM Standard Practice E 1527-21. The purpose of the ASTM Standard Practice E 1527-21 is:

“to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the “landowner liability protections,” or “LLPs”): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B).

The goal of the process established by this practice is to identify recognized environmental conditions associated with the subject property. The term recognized environmental condition is defined by Practice E 1527-21 as:

“the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.” Release to the environment entails the migration or movement of hazardous substances or petroleum products in any form, including solids and liquids at the surface or subsurface, and vapor in the subsurface to, within, or from the subject property. If such conditions exist on the subject property, and are not de minimis, the condition is a recognized environmental condition.

Key terms used in this report that are specifically defined by Practice E 1527-21 are provided in **Section 9.0, Glossary of Key Terms**.

1.3 CONTINUED VIABILITY AND USER RELIANCE

ASTM defines the “user” as the party seeking to use Practice E 1527-21 to complete an ESA of the subject property. A user may include, without limitation, a potential purchaser of the subject property, a potential tenant of the subject property, an owner of the subject property, a lender, or a property manager. The findings and conclusions contained within this report may not be used or relied upon by any other parties without the written consent of the client/primary user that contracted PPM to conduct this assessment and PPM. The client/primary user may designate other users who may rely on this report. All users currently identified by the client/primary user are named in **Section 2.1, Users of Report**.

In accordance with the ASTM practice, AAI components (interviews, government records, site reconnaissance, and declaration of environmental professional) must be completed or updated no more than 180 days prior to date of acquisition or intended transaction, and all other components must be updated within one year. Dates of AAI components are listed in the following table:

AAI Component	Date
Interviews	May 10, 2023
ERIS Radius Report	April 12, 2023
Regulatory Agency File Review	May 10, 2023
Site Reconnaissance	April 12, 2023
Declaration of Environmental Professional	May 19, 2023

If a party different from the original user(s) intends to use this report, the subsequent user(s) must also satisfy the following requirements at a minimum:

- Obtain written authorization to rely on this report from the original client/primary user and PPM.
- Fulfill the User’s Responsibilities outlined in **Section 2.0, User Provided Information**.
- Contract PPM to update the report if the original report is over 180 days and less than one year old.

If the report is greater than one year old at the time of acquisition by any user, no part of the report can be relied upon in order to satisfy all appropriate inquiry.

2.0 USER-PROVIDED INFORMATION

2.1 USERS OF REPORT

The Union County contracted PPM to perform this Phase I ESA and is considered the client and the primary user of this report.

2.2 USER QUESTIONNAIRE

The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires that certain tasks be performed by or on behalf of a party seeking to qualify for landowner liability protections (LLP) to CERCLA liability (i.e. the user). These tasks must also be completed by or on behalf of EPA Brownfield Assessment and Characterization grantees. While such information is not required to be provided to the environmental professional (i.e. PPM), the environmental professional must request information from the user to assist in identifying

recognized environmental conditions. The User Questionnaire found in Appendix X3 of Practice E 1527-21 was provided to each of the users identified in **Section 2.1, Users of Report**. Responses to the User Questionnaire are provided in **Appendix B, User Provided Information**. Additional information provided by the user regarding their knowledge of environmental conditions at the subject property are provided in **Section 5.0, Interviews**.

2.3 ENVIRONMENTAL LIENS AND ACTIVITY USE LIMITATIONS

The primary user/client contracted PPM to conduct a search of land title records for environmental liens or activity and use limitations (AUL) filed or recorded against the subject property. The title search was performed by ERIS. This search revealed there were no environmental liens or AULs filed or recorded against the subject property. The title search results are provided in **Appendix E, Other Documentation**.

2.4 OTHER INFORMATION PROVIDED BY USER(S)

Other information provided by the user(s) includes the following:

- The user identified Billy Elixson at 386-496-3883 as the subject property owner and contact.
- The user provided the following documents attached in **Appendix B**:
 - USER QUESTIONNAIRE

2.5 USER SPECIFIED TERMS, CONDITIONS, AND LIMITATIONS

The primary user/client did not request or specify any special terms, conditions, limitations, or considerations that would limit, deviate from, reduce, or add to the scope of this assessment with respect to Practice E 1527-21.

3.0 SITE RECONNAISSANCE

3.1 METHODOLOGY

The objective of the site reconnaissance is to visually and physically observe the subject property and the adjoining properties for any uses or conditions that may indicate the likelihood of recognized environmental conditions in connection with the subject property. During the site reconnaissance, PPM visually inspected the grounds and structures (if any) on the subject property to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. Interior and exterior inspections focused on practices that may involve the use, treatment, storage, disposal, generation, or release of hazardous substances or petroleum products. Exterior and interior observations were made of the subject property. Observations of adjoining properties were made from the subject property and surrounding public thoroughfares and adjoining properties.

Site reconnaissance did not include invasive or physical inspections of observed releases, such as ground disturbance to determine the thickness of a spill, or opening and inspecting the contents of vaults, manholes, storage tanks, drums, and other containers suspected to contain hazardous substances or petroleum products. For large or complex properties, special methods of observation (for example, grid patterns or other systematic approaches) may have been developed by the environmental professional in order to satisfy the objective of the assessment in a timely and cost-effective manner.

For this assessment, there was no special methodology used to inspect the subject property.

3.2 LIMITING CONDITIONS ENCOUNTERED DURING SITE VISIT

General limitations and basis of review, including limitations imposed by physical obstructions such as adjacent buildings, bodies of water, asphalt, or other paved areas, and

3.3 SUBJECT PROPERTY OBSERVATIONS

SUBJECT PROPERTY LAND USES	
Were any of the following conditions observed or suspected on the subject property?	
Condition	
Structures & Improvements:	None observed
Onsite Roads and Parking:	None observed
Adjoining Roads:	Northeast 101 Trail to south, Highway 100 to southwest, and Highway 121 to west
Potable Water Supply/Source:	None observed
Sewage Disposal System:	None observed
Hazardous Substance Usage:	None observed
Petroleum Product Usage:	None observed
Storage Tanks:	None observed
Strong Odors & Sources:	None observed
Standing Surface Water, Pools, or Sumps Containing Liquids:	None observed
Drums, Totes, & Intermediate Bulk Containers:	None observed
Hazardous Substance and Petroleum Product Containers not Connected with Identified Uses:	None observed
Unidentified Substance Containers:	None observed
PCB-containing Items:	None observed
Heating/Cooling System:	None observed
Stains or Corrosion on Floors, Walls, or Ceilings:	None observed
Drains, Sumps, & Oil/Water Separators:	None observed
Pits, Ponds, & Lagoons:	None observed
Stained Soil or Pavement:	None observed
Stressed Vegetation:	None observed
Solid Waste Disposal:	None observed
Waste Water:	None observed
Wells:	None observed

3.4 ADJOINING PROPERTY OBSERVATIONS

ADJOINING LAND USES	
North-northwest	Wooded vacant land
North	Residential
Northeast	Wooded vacant land
East	Residential with a pond
South	Wooded vacant land
Southwest	Residential, former store/office
West	Hardee's fast food restaurant

Were any of the following conditions observed or suspected on an adjoining property?
Condition
Waste Water: None observed
Pits, Ponds, & Lagoons: A small pond was observed at the adjoining residential property to the east.
Storage Tanks: None observed
Drums, Totes, & Other Bulk Containers: None observed
Abandoned Containers: None observed
Unidentified Substance Containers: None observed
PCB-containing Items: None observed
Strong Odors & Sources: None observed
Stressed Vegetation: None observed
Stained Soil or Pavement: None observed
Solid Waste Disposal: None observed
Wells: None observed

3.5 SURROUNDING AREA OBSERVATIONS

SURROUNDING AREA LAND USES
<p>The surrounding area includes a mix of residential and commercial use.</p> <p>North and east of the subject property includes residential areas and wooded vacant land.</p> <p>South of the subject property includes residential areas, wooded vacant land, Pritchett Trucking and Fueling Facility, and Exxon Petroleum Station (Fast Track Foods #214).</p> <p>West of the subject property is mostly used for commercial business including Lake Butler Hospital, Union County School District Bus Garage and a CVS Pharmacy.</p>

4.0 RECORDS REVIEW

4.1 PHYSICAL SETTING SOURCES

4.1.1 Mandatory Standard Physical Setting Resources

PPM reviewed the most recent USGS 7.5 Minute Topographic Map dated 2021 for the Lake Butler Quadrangle in which the subject property is located. The map is used as the base map for **Figure 1, Site Location Map**, provided in **Appendix A**. According to this map, the subject property has an elevation of approximately 130 feet above mean sea level (AMSL). The area topography slopes to the southeast with an approximate gradient of 0.006 feet/feet. Notable geographical features in the surrounding area include: Richard Creek located approximately 1,500 feet south-southeast of the subject property and Butler

Lake located approximately 3,500 feet northwest of the subject property. Based on the relative elevation between the subject property at 130 feet AMSL and the nearest perennial body of surface water at 120 feet AMSL, the depth to groundwater beneath the subject property is estimated to be 10 feet below ground surface (BGS).

PPM also reviewed area-specific physical setting information that was obtained pursuant to agency file review for the Fast Track Foods #214 facility located 350 feet west-southwest from the subject property. Site investigations at this facility provided that the groundwater flow direction at this facility was toward the south. The depth to groundwater was 3 to 12 feet BGS; subsurface lithology consisted of sand to clay.

4.1.2 Discretionary and Non-Standard Physical Setting Resources

In the development of areas of concern (AOC) search distances for vapor encroachment screening per ASTM E 2600, Paper 2011-A-301-AWMA, *Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration for nearby Contaminated Sources*, by Anthony J. Buonicore, cited several research papers that established the 90th percentile dissolved-phase plume lengths for volatile petroleum and non-petroleum releases to be less than approximately 390 feet and 1,590 feet, respectively. Based on their cited experience, the AOCs for vapor migration potential were expanded to 528 feet for petroleum and 1,760 feet for non-petroleum VOCs for releases from up-gradient sources. These distances were regarded as conservative or based on relatively favorable conditions for both groundwater migration in the saturated zone and vapor migration in the vadose or unsaturated zone.

For cross-gradient sources where groundwater migration to the subject property is not considered likely, the AOCs for vapor migration were reduced to 95 feet for dissolved-phase petroleum, 165 feet for free product or light non-aqueous phase liquid (LNAPL) petroleum, and 365 feet for non-petroleum. The corresponding logic was that cross-gradient groundwater migration potential to the subject property is less than that of vapor migration.

For down-gradient sources where groundwater migration to the subject property is not considered likely, the AOCs for vapor migration were reduced to 30 feet for dissolved-phase petroleum, 100 feet for LNAPL petroleum, and 100 feet for non-petroleum.

The corresponding logic with each of these AOC gradient scenarios for VOC releases is that: (1) the potential distance for groundwater migration is less than the potential distance of groundwater plus vapor migration; (2) vapor can migrate independent of its groundwater source; (3) a REC can exist for vapor migration only; (4) a groundwater REC is also a vapor REC; and therefore (5) the vapor migration AOCs can also be used to conservatively evaluate groundwater migration.

The use of these AOCs to evaluate non-volatile COCs would be unreasonably excessive in that they: (1) do not produce vapors and (2) are typically considerably less soluble therefore are less mobile in groundwater. Instead, non-volatile COC releases will generally be evaluated as a subject or adjoining property issue.

To be conservative with petroleum releases using this initial screening, PPM utilizes the AOCs for petroleum releases with free product. With the exceptions listed below, all known or suspected releases beyond the AOC distances for vapor migration will not be considered RECs in connection with the subject property. All known or suspected releases within the AOC distances will be further evaluated either through document review, interviews, or further evaluation of the physical setting. For example, the presence of a hydraulic barrier such as a creek will also serve as a barrier to vapor migration. If definitive information cannot be found that can be used to eliminate a known or suspected release as a REC, then its presence within a relevant AOC will be considered a REC due to vapor migration at a minimum.

The exceptions are: (1) Federal National Priority List (NPL) and Resource Conservation and Recovery Act (RCRA) transport, storage, and disposal (TSD) facilities, which require additional record review per ASTM E 1527-21 Sections 8.2.2 and 8.2.3; and (2) PPM’s personal or specialized knowledge of releases in the area that have the potential to migrate further than these distances; (3) personal or specialized knowledge of releases or vapors reported by the subject property owner, manager, or occupants.

4.1.3 AOC Site Conceptual Model

Based on the Physical Setting review, the known/inferred groundwater flow direction in the study area is toward the south; therefore, the AOCs for this assessment are as follows:

Contaminant Type	Gradient, Direction, Distance (feet)		
	Up-gradient (North)	Cross-gradient (East and West)	Down-Gradient (South)
Non-Petroleum VOC	1,760	365	100
Petroleum LNAPL	528	165	100

There were no modifications made to the AOC distances for this investigation.

4.2 REGULATORY RECORD REVIEW

PPM retained the services of ERIS, a third-party database provider, to provide information available from state, local tribal, and federal databases regarding reported environmental activities and releases in the vicinity of the subject property. This information, along with other government record sources obtained during the assessment, were reviewed to help determine the likelihood of hazardous substances or petroleum products impacting the subject property.

4.2.1 Standard Environmental Record Sources

As allowed by Section 8.1.2.1 of the Standard Practice, the approximate minimum search distance (AMSD) for standard environmental record sources can be adjusted at the discretion of the environmental professional in consideration of such factors as: (1) the density of the setting in which the subject property is located; (2) the distance that the hazardous substances or petroleum products are likely to migrate subject to local geologic or hydrogeological conditions; (3) the property type; (4) existing or past uses of surrounding properties; and (5) other reasonable factors. Per ASTM, the only AMSDs that cannot be adjusted downward are for Federal National Priorities List (NPL) and Federal Resource Conservation and Recovery Act (RCRA) Transport, Storage and Disposal (TSD) records. If an AMSD was adjusted, the adjusted AMSD will be the AMSD used in the confirmed column.

For the subject property, there was no adjustment to the standard AMSDs.

The third-party database vendor provided the following standard environmental record sources:

SUMMARY OF THIRD-PARTY DATABASE REVIEW					
Type of Site <small>(Abbreviations used in subsequent tables are in parentheses)</small>		Search Distance		Number Identified	
		Standard AMSD	Adjusted AMSD	Potential within AMSD	Confirmed within AMSD
Federal Lists	NPL or Superfund (NPL)	1.0 mile		0	0
	Delisted NPL sites (DNPL)	0.5 Mile	N/A	0	0
	CERCLA Removals and Orders (RAO)	0.5 Mile	N/A	0	0
	CERCLIS with NFRAP (NFRAP)	0.5 Mile	N/A	0	0
	RCRA undergoing Corrective Action (RCA)	1.0 Mile	N/A	0	0
	RCRA Transport, Storage, Disposal Facilities (TSD)	0.5 Mile		0	0

	RCRA Generator (GEN)	Subject and Adjoining		0	0
	Institutional/Engineering Control (IC/EC)	Subject Property		0	0
	ERNS	Subject Property		0	0
State/Tribal Lists:	Superfund Equivalent (SNPL)	1.0 Mile	N/A	0	0
	Hazardous Waste Facilities (HWF)	0.5 Mile	N/A	0	0
	Landfill/Solid Waste Disposal (SWD)	0.5 Mile	N/A	1	1
	Leaking underground storage tank (LUST)	0.5 Mile	N/A	5	5
	Registered Storage Tank (RUST/RAST)	Subject and Adjoining		0	0
	Institutional/Engineering Control (IC/EC)	Subject Property		0	0
	Voluntary Cleanup Sites (VCP)	0.5 Mile	N/A	0	0
	Brownfields Sites (BF)	0.5 Mile	N/A	0	0
Database Provider:	ERIS				
Attachments:	Regulatory Record documents are provided in Appendix D, Regulatory Research Documentation .				

4.2.2 Preliminary Screening of Standard Environmental Record Sources

The first stage of evaluating Standard Sources, will consider critical and non-critical factors stated or implied by the Standard Practice. Critical factors are conditions that will require further investigation in order to determine that the condition represents a REC in connection with the subject property. Critical factors include (1) conditions existing on the subject property or on an adjoining property; (2) a Standard Source listing as a Federal NPL or Federal RCRA TSD facility; and (3) a Standard Source listing being located within a relevant AOC Critical Distance (see **Section 4.1.3, AOC Site Conceptual Model**).

Conditions existing on the subject property or on an adjoining property, Federal NPL facilities, and Federal RCRA TSD facilities will automatically proceed to further investigation by record review (**Section 4.2.3, Additional Regulatory File Review**), interviews, or observation.

Other Standard Source Listings will be further screened in this section based on the nature of the chemicals of concern (COC), which are either non-petroleum volatiles, petroleum (assumed to be free product), or non-volatiles [such as metals, polynuclear aromatic hydrocarbons (PAH), and other semi-volatile organic compounds]; known or inferred groundwater gradient orientation relative to the subject property (up, cross, or down); and distance from the subject property in feet. If the nature of the released COC is unknown at this stage, the preliminary screening will assume the COCs are worst-case non-petroleum volatiles. Unless the database provider indicates otherwise, it is assumed a release from a commercial LUST is free product petroleum. Standard Source listings located outside an

AOC Critical Distance are concluded to not represent RECs in connection with the subject property; therefore, are eliminated from further discussion in this report. Standard Source listings located inside an AOC Critical Distance will proceed to **Section 4.2.3, Additional Regulatory File Review.**

PRELIMINARY SCREENING OF STANDARD REGULATORY DATABASE LISTINGS							
Facility Name	AOC Parameters						Eliminate or Proceed?
	Site Type	COC	Gradient	Distance (feet)		Inside/Outside	
				Actual	Critical		
Fast Track Foods #214	LUST	Petroleum	Cross	350	165	Outside	Eliminate
Kwik Stop Karen's	LUST	Petroleum	Cross	1,800	165	Outside	Eliminate
Doyle Varnes Insurance Agency	LUST	Petroleum	Cross	2,000	165	Outside	Eliminate
Union County School BD Bus Garage	LUST	Petroleum	Down	1,300	100	Outside	Eliminate
Pritchett Trucking	SWF/LF	Non-petroleum	Down	1,559	100	Outside	Eliminate
Pritchett Trucking	LUST	Petroleum	Down	1,559	100	Outside	Eliminate

All Standard Source listed sites were eliminated by the preliminary screening process.

4.2.3 4.2.3 Additional Regulatory Record Review

There were no additional regulatory records reviewed during this assessment.

4.3 OTHER ENVIRONMENTAL RECORDS

There were no other environmental records files reviewed during this assessment.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Historical Records Inventory

Historical records with information sources reviewed are summarized in the following table:

Year(s)	Record	Source	Year(s)	Record	Source
1938	Agricultural Stabilization & Conservation Service	Aerial	2006	USDA	Aerial
1949	Agricultural Stabilization & Conservation Service	Aerial	2007	USDA	Aerial
1951	Army Mapping Service	Aerial	2010	USDA	Aerial
1958	Agricultural Stabilization & Conservation Service	Aerial	2012	Digital Business Directory	CD
1964	USGS	Aerial	2013	USDA	Aerial
1971	FDOT	Aerial	2015	USDA	Aerial
1978	FDOT	Aerial	2016	Digital Business Directory	CD
1981	FDOT	Aerial	2017	USDA	Aerial
1987	FDOT	Aerial	2019	MAXAR Tech.	Aerial
1995	USGS	Aerial	2020	Digital Business Directory	CD
1998	Digital Business Directory	CD	2021	USDA	Aerial
1999	USGS	Aerial	2022	Digital Business Directory	CD
2003	Digital Business Directory	CD			
2005	USDA	Aerial			
What was the first year of subject property use?			Vacant with roadways running through the subject property.		
Was subject property history determined back to first use or 1940 whichever is earliest?				Yes	
Were all record intervals after first use 5 years or less?				No	
See Section 6.0, Findings and Opinions for further discussion of data failure.					
Sources may be Fire Insurance Maps (FIRE) such as Sanborn, USGS Topographic Maps (TOPO), Aerial Photographs (AERIAL), City Directories (CD), Building Department Records (BLDG), Property Tax Files (TAX), Zoning/Land Use Records (ZONE), Title Records (TITLE), or Interviews with Owners and Others (INTERVIEW). Copies of Historical Records Documentation is provided in Appendix E, Historical Records Documentation .					

4.4.2 Subject Property Historical Summary

Range	Subject Property Conditions
1938-1964	The earliest historical record for the subject property includes an aerial photograph from 1938. The subject property is vacant with the exception of two dirt roads that join in the south-central area and run from east to west. The 1958 aerial photograph is similar with the exception of another wider road shown running north to south in the western portion of the subject property. By 1964 the subject property shows heavier vegetation throughout the subject property and another road along the southern-most property line.

Range	Subject Property Conditions (Continued)
1964-1999	By 1978, the subject property is completely covered by trees but the roads running north to south and east to west are visible in the tree lines. The 1987 aerial photograph shows all the dirt roads, with the exception of the southern-most road to be overgrown and not defined.
1999-Present	The 1999 aerial photograph shows no traces of the dirt roads on the subject property with the exception of the southern-most road. By 2005, the subject property is similar to the present-day configuration.

4.4.3 Adjoining Property Historical Summary

The first historical record for adjoining properties includes an aerial photograph from 1938. All adjoining properties consist of cleared or wooded vacant land. The first development of adjoining properties is seen on the 1958 aerial photograph that shows some smaller residential or office buildings adjoining to the southwest. The 1971 aerial photograph shows a residential home adjoining to the north of the subject property. By 1981 the smaller buildings adjoining to the southwest have been demolished and one larger commercial building remains. Aerial photographs remain similar until 1995 when another commercial building appears to the west of the subject property and some smaller residential homes appear in the cleared land to the east of the subject property.

The first available city directory listing in 1998 confirms the commercial property adjoining to the west (1205 East Main Street) to be Hardee’s fast food restaurant. The 2008 city directory lists one of the properties adjoining to the southwest (1210 East Main Street) as a residential home. The historical aerial photographs and city directories for adjoining properties remain similar after 2008 until the last historical record in 2022.

Year	Adjoining Property Conditions
1938	North – Vacant East – Vacant South – Vacant West – Vacant
1958	North – Vacant East – Vacant South – Residential West – Vacant
1981	North – Residential East – Vacant South – Residential and commercial West – Vacant
1999	North – Residential East – Residential and vacant South – Residential and commercial West – Commercial and vacant
2010	North – Residential East – Residential and vacant South – Residential and commercial West – Commercial and vacant

Year	Adjoining Property Conditions (Continued)
2022	North – Residential East – Residential and vacant South – Residential and commercial West – Commercial and vacant

4.4.4 Surrounding Property Historical Summary

The surrounding properties have historically consisted of vacant and residential properties to the north, east, and south of the subject property. The surrounding area to the west of the subject property was first developed for commercial and residential land in the early 1970s according to aerial photographs. The commercial properties include the Lake Butler Hospital and Union County School Bus District Garage.

5.0 INTERVIEWS

PPM conducted interviews when possible with individuals who may have knowledge of the subject property and surrounding area. The objective of interviews is to obtain information from persons likely to have actual knowledge of current and past uses or conditions of the subject property, adjoining properties, and surrounding area that may indicate the likelihood of recognized environmental conditions in connection with the subject property. The focus and quality of information is highly variable with each type of contact and individual. The persons interviewed were asked to be as specific as reasonably feasible in answering questions. Interview information is provided below:

INTERVIEW WITH SUBJECT PROPERTY OWNER	
Interviewer:	Kevin Grosjean
Date(s) Attempted:	May 17, 2023
Name of Contact:	Billy Elixson
Title/Affiliation:	Owner
Contact Information:	386-496-3883
Mr. Elixson stated the following: <ul style="list-style-type: none"> · As far as he knows, the subject property has always been woods · Not personally aware of any spills on the subject or surrounding properties · Only owned the property since September 2022 · The previous site owner told his realtor the site has never had any environmental issues · West side of 121 had preliminary roads for a subdivision back in the 1980s, but it never ended up being developed. 	

INTERVIEW WITH PRIMARY USER/CLIENT	
Interviewer:	Kevin Grosjean
Date(s) Attempted:	May 12, 2023, May 17, 2023
Name of Contact:	Jimmy Williams
Title/Affiliation:	Union County / County Coordinator
Contact Information:	386-623-1316
<p>Mr. Williams stated the following:</p> <ul style="list-style-type: none"> · Unaware of any past spills on the subject property or surrounding properties · To his knowledge, the subject property has always been woods. · The adjoining property to the southwest across Highway 100 never operated as a cleaner as indicated by the words painted on the exterior wall of one of its structures. · The property across from parcel 1 used to be a bar · Parcel 3 was platted to be a subdivision, but it was never recorded and it didn't ever get developed 	
INTERVIEW WITH STATE/LOCAL AGENCY OFFICIAL	
Interviewer:	Kevin Grosjean
Date(s) Attempted:	May 12, 2023
Name of Contact:	Union County Fire Department
Title/Affiliation:	N/A
Contact Information:	PPM requested a public records request for and incidents or hazardous spills at the subject property.
<ul style="list-style-type: none"> · At the time of the completion of this report no response has been issued by the Union County Fire Department. 	

6.0 FINDINGS AND OPINIONS

This section identifies those features, activities, uses, and conditions that in the judgement of the environmental professional may indicate the presence or likely presence of hazardous substances or petroleum products at the subject property. This information includes a summary of relevant findings from all sources discussed previously (site reconnaissance, government records, physical setting sources, interviews, historical sources, etc.). The opinions provided below include PPM's rationale for concluding that a

environmental condition (CREC) historical recognized environmental condition (HREC),

PPM commented how the missing information that
ed our ability to provide an opinion as to whether the

PPM also discussed whether
additional information would likely assist PPM in determining whether a REC or CREC
exists.

6.1 DATA GAPS

Data gaps encountered by this investigation are as follows:

- Data failure identifying subject property use consistently at 5-year intervals.
- Due to physical constraints of dense vegetation, the site reconnaissance was unable to inspect the entire property.

Because PPM was able to make reasonable conclusions regarding RECs, PPM does not consider this data gap encountered to represent a significant data gap (SDG).

6.2 SUBJECT PROPERTY

6.2.1 Historical Subject Property Uses

The earliest historical record for the subject property includes an aerial photograph from 1938. The subject property is vacant with the exception of two dirt roads that join in the south-central area and run from east to west. The 1958 aerial photograph is similar with the exception of another wider road shown running north to south in the western portion of the subject property. By 1964, the subject property shows heavier vegetation throughout the subject property and another road along the southern-most property line. By 1978, the subject property is completely covered by trees but the roads running north to south and east to west are visible in the tree lines. The 1987 aerial shows all the dirt roads, with the exception of the southern-most road to be overgrown and not defined. The 1999 aerial photograph shows no traces of the dirt roads on the subject property with the exception of the southern-most road. By 2005, the subject property is similar to the present-day configuration. Currently site access is limited to a short dirt road that enters the subject property from the east for a distance of approximately 100 yards. All other areas are heavily wooded.

Because the subject property has historically been vacant land with no hazardous or petroleum use, the historical use of the subject property is not considered to be a REC.

6.2.2 Current Subject Property Uses

There is no current use for the subject property.

6.3 ADJOINING LAND USES

6.3.1 Historical Uses

The first historical record for adjoining properties includes an aerial photograph from 1938. All adjoining properties consist of cleared or wooded vacant land. The first development of adjoining properties is seen on the 1958 aerial photograph that shows some smaller residential or office buildings adjoining to the southwest. The 1971 aerial photograph shows a residential home adjoining to the north of the subject property. By 1981 the smaller buildings adjoining to the southwest have been demolished and one larger commercial building remains. Aerial photographs remain similar until 1995 when another commercial building appears to the southwest of the subject property and some smaller residential homes appear in the cleared land to the east of the subject property. This area is currently a cattle ranch.

The first available city directory listing in 1998 confirms the commercial property adjoining to the southwest (1205 East Main Street) to be Hardee's fast food restaurant. The 2008 city directory lists one of the properties adjoining to the southwest across Highway 100 (1210 East Main Street) as a residential home. The historical aerial photographs and city directories for adjoining properties remain similar after 2008 until the last historical record in 2022.

Because the adjoining properties have been vacant, residential, and a restaurant no threats of hazardous or petroleum releases to the subject property would be likely. The historical uses of adjoining properties are not be considered to be a REC in connection to the subject property.

6.3.2 Current Uses

The adjoining properties to the north, east, and south include vacant and residential land. The southern adjoining properties consist of residential homes. The properties adjoining to the west include vacant land and a fast food restaurant. The current adjoining property uses are similar to the historical uses and are not considered to be a REC in connection with the subject property.

6.4 CONCLUSIONS

PPM has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the Tomahawk Parcel 1 located at the northeast corner of highway 121 and highway 100, Lake Butler, Florida, the subject property. Any exceptions to, or deletions from, this practice are described in **Sections 2.5, User Specified Terms, Conditions, and Limitations** of this report.

This assessment has revealed no evidence of RECs, CRECs, and/or SDGs in connection with the subject property.

6.5 ADDITIONAL INVESTIGATION OPINION

In accordance with Practice E1527-21, PPM has provided an opinion regarding additional appropriate investigation, if any, in the circumstance when greater certainty is required regarding the identification of recognized environmental conditions. This opinion does not render the assessment incomplete and is not intended to constitute a recommendation for a Phase II ESA or other assessment activities. Recommendations are not required by this practice and will only be provided at the request of the user.

It is PPM's professional opinion that additional investigation is not warranted to detect the presence of hazardous substances or petroleum products beneath the subject property.

6.6 ENVIRONMENTAL PROFESSIONAL STATEMENT

I, Gregory Stover, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR § 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. My signature is provided on the cover of this report. My environmental professional qualifications are provided in **Appendix G, Qualifications of Environmental Professionals** of this report.

7.0 NON-SCOPE SERVICES

PPM did not provide any additional services outside the scope of Practice E1527-21.

8.0 GLOSSARY OF KEY TERMS

The following is a list of key terms used in this report with definitions per Practice E1527-21:

legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no

institutional and/or engineering controls, are intended to pre-vent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

any real property or proper-ties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

a person may qua requirements, such person made “all appropriate inquiries into the previous ownership and uses of the facility in accordance with generally accepted good commercial and customary standards and practices.” Knowledge of contamination resulting from all appropriate inquiries would not generally preclude this liability protection. A person must make all appropriate inquiries on or before the date of purchase.

a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice.

a person may qualify for the contiguous property owner liability protection if, among other requirements, such person owns real property that is contiguous to, and that is or may be contaminated by hazardous substances from other real property that is not owned by that person. Furthermore, such person conducted all appropriate inquiries at the time of acquisition of the subject property and did not know or have reason to know that the subject property was or could be contaminated by a release or threatened release from the contiguous property. The all appropriate inquiries must not result in knowledge of contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the contiguous property owner liability protection.

recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

a failure to achieve the historical research objectives set by Practice E1527-21 even after reviewing the standard historical sources listed by Practice E1527-21 that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

CERCLA 42 U.S.C. § 9601(8) defines “environment” to mean (A) the navigable waters, the waters of the contiguous zone, and the ocean waters of which the natural resources are under the exclusive management authority of the United States under the Magnuson-Stevens Fishery Conservation and Management Act [16 U.S.C. 1801 et seq.], and (B) any other surface water, ground water, drinking water supply, land surface or subsurface strata, or ambient air within the United States or under the jurisdiction of the United States.

a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property.

a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

a substance defined as a hazardous substance pursuant to CERCLA 42 U.S.C. §9601(14), as interpreted by EPA regulations and the courts. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a *hazardous substance*, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).

: a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

One of the three Landowner Liability Protections (LLPs). A person may qualify as one of three types of innocent landowners: (i) a person who “did not know and had no reason to know” that contamination existed on the property at the time the purchaser acquired the property; (ii) a government entity which acquired the property by escheat, or through any other involuntary transfer or acquisition, or through the exercise of eminent domain authority by purchase or condemnation; and (iii) a person who “acquired the facility by inheritance or bequest.” To qualify for the innocent landowner defense, such person must have made all appropriate inquiries on or before the date of purchase. Furthermore, the all appropriate inquiries must not have resulted in knowledge of the contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the innocent landowner defense.

the person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.

landowner liability protections under CERCLA; these protections include the bona fide prospective purchaser liability protection, contiguous property owner liability protection, and innocent landowner defense from CERCLA liability. See 42 U.S.C. §§9601(35)(A), 9601(40), 9607(b), 9607(q), 9607(r).

obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

or the purposes of this practice, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

owner generally, the fee owner of record of a property.

those substances included within the meaning of the petroleum exclusion to CERCLA, 42 U.S.C. §9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosine, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

information that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the subject property without the need for extraordinary analysis of irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the subject property or a geographic area in which the subject property is located are not generally practically reviewable. Most data-bases of public records are practically reviewable if they can be obtained from the source agency by the county, city, zip code, or other geographic

source agency only chronologically are not generally practically reviewable. Listings in publicly available records which do not have adequate address information to be located geographically are not generally considered practically reviewable. For large databases with numerous records (such as RCRA hazardous waste generators and registered under-ground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of zip codes. Even when information is provided by zip code for some large databases, it is common for an unmanageable number of

the sites that are likely to be listed in any given zip code because that information would not be practically reviewable. In other words, when so much information is generated that it cannot be feasibly reviewed regarding its impact on the subject property, it is not practically reviewable.

real property, including
the land.

information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;(2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment..

a release of any hazardous substance or petroleum product shall have the same meaning as the definition of “release” in CERCLA 42 U.S.C. § 9601(22)). The first element for establishing CERCLA liability is that there must be a release or threatened release of hazardous substances from a facility or a vessel. A release or threatened release of a hazardous substance includes any “spilling, leaking, lift, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping or disposing into the environment

(including the abandonment or discarding of barrels, containers and other closed receptacles containing any hazardous substance, or pollutant or contaminant.”

a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

the property that is the subject of the environmental site assessment described in this practice.

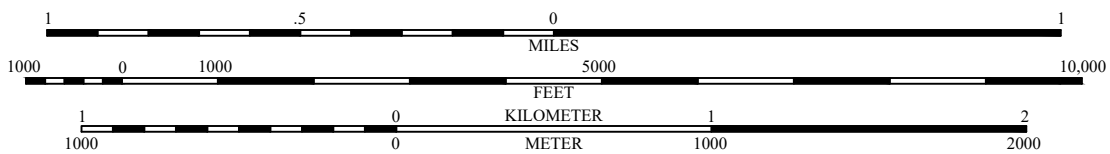

the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property.

APPENDIX B – USER PROVIDED INFORMATION

USER QUESTIONNAIRE FORM

For your convenience, PPM has prepared this form to help you, the user of the Phase I ESA to easily provide "Client responsibility" and other pertinent information. Please complete the form at your discretion and return to PPM with the authorization to proceed for inclusion in the report.

Did your search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Yes <input type="radio"/> No <input type="radio"/>
Did your search of recorded land title records identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Yes <input type="radio"/> No <input type="radio"/>
If you have not searched land title records, do you request PPM to provide this service to you for an additional fee?	Yes <input type="radio"/> No <input type="radio"/>
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Yes <input type="radio"/> No <input type="radio"/>
Does the purchase price being paid for this property reasonably reflect the fair market value of the property?	Yes <input type="radio"/> No <input type="radio"/>
If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Yes <input type="radio"/> No <input type="radio"/>
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,	
(a.) Do you know the past uses of the property?	Yes <input type="radio"/> No <input type="radio"/>
(b.) Do you know of specific chemicals that are present or once were present at the property?	Yes <input type="radio"/> No <input type="radio"/>
(c.) Do you know of spills or other chemical releases that have taken place at the property?	Yes <input type="radio"/> No <input type="radio"/>
(d.) Do you know of any environmental cleanups that have taken place at the property?	Yes <input type="radio"/> No <input type="radio"/>
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	Yes <input type="radio"/> No <input type="radio"/>
Can you provide any documentation relevant to the assessment such as previous Phase I or II ESAs, UST closure assessments, site investigations, or other records?	Yes <input type="radio"/> No <input type="radio"/>
Can you provide any site maps, legal descriptions, or other information that will clearly define the property boundaries?	Yes <input type="radio"/> No <input type="radio"/>

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program:

[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

[NPL](#)

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 25, 2023

National Priority List - Proposed:

[PROPOSED NPL](#)

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 25, 2023

Deleted NPL:

[DELETED NPL](#)

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jan 25, 2023

SEMS List 8R Active Site Inventory:

[SEMS](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 25, 2023

Inventory of Open Dumps, June 1985:

[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 25, 2023

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 23, 2023

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Jan 23, 2023

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 23, 2023

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 23, 2023

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Sites with Controls:

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jan 23, 2023

Federal Engineering Controls-ECs:

[FED ENG](#)

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 22, 2022

Federal Institutional Controls- ICs:

FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 22, 2022

Land Use Control Information System:

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites:

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Jan 25, 2023

Emergency Response Notification System:

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Jan 16, 2023

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing:

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

[FRP](#)

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans:

[DELISTED FRP](#)

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations:

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property:

[SEMS LIEN](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 25, 2023

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Dec 22, 2022

State

Superfund Waste Cleanup & State-Funded Action Sites:

[SHWS](#)

List of hazardous waste cleanup sites participating in various federal and state funded cleanup programs. Florida's State-Funded Action Sites and Superfund Waste Cleanup Sites lists are maintained and made available by the Florida Department of Environmental Protection (FDEP). This database is state equivalent CERCLIS.

Government Publication Date: Mar 16, 2023

Delisted State-Funded Action Sites:

[DELISTED SHWS](#)

This database contains a list of closed hazardous waste sites of various federal and state funded cleanup programs that were removed from the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Mar 16, 2023

ERIC Waste Cleanup:

ERIC

Environmental Restoration Integrated Cleanup (ERIC) is a single database for tracking contaminated site cleanup activities in the Florida Department of Environmental Protection (DEP)'s Division of Waste Management (DWM). Includes records from 11 different DEP data systems, allowing tracking of a contaminated site throughout the course of cleanup regardless of which program area took the lead.

Government Publication Date: Feb 8, 2023

Florida Department of Environmental Protection Cleanup Sites:

CLEANUP DEP

The Cleanup Sites layer feeds the FDEP's Contamination Locator Map (CLM). It provides locations and document links for sites currently in the cleanup process and sites awaiting cleanup funding. Cleanup programs include: Brownfields, Petroleum, EPA Superfund (CERCLA), Drycleaning, Responsible Party Cleanup, State Funded Cleanup, State Owned Lands Cleanup and Hazardous Waste Cleanup.

Government Publication Date: Feb 22, 2023

Waste Cleanup Responsible Party Sites:

WCRPS

List of Open, Closed, and Inactive Waste Cleanup Responsible Party sites made available by the Florida Department of Environmental Protection.

Government Publication Date: Apr 11, 2021

Delisted Waste Cleanup Sites:

DELISTED WCP

List of sites which once appeared on - and have since been removed from - the list of Waste Cleanup Sites made available by the Florida Department of Environmental Protection.

Government Publication Date: Feb 22, 2023

Solid Waste Facilities and Landfills:

SWF/LF

The Solid Waste Facility Inventory Report made available by the Florida Department of Environmental Protection (FDEP) includes all types of authorized and unauthorized facilities: municipal solid waste, landfills, dumps, construction and demolition disposal, recycling facilities, and more.

Government Publication Date: Nov 24, 2022

Leaking Tanks:

LST

The Storage Tank Regulation Section is part of the Petroleum Restoration Program in the Florida Department of Environmental Protection (FDEP)'s Division of Waste Management. In 1983, Florida was one of the first states in the union to pass legislation and adopt rules for underground and aboveground storage tank systems. Since then, over 28,000 facilities have reported discharges of petroleum products from storage tank systems. Florida relies on groundwater for about 92 percent of its drinking water needs, and has some of the most stringent rules in the country.

Government Publication Date: Mar 23, 2023

Delisted Leaking Tanks:

DELISTED LST

Whereas Leaking Tanks (LST) includes only facilities which currently have contamination as recorded by the Florida Department of Environmental Protection, this list contains facilities which were once included in LST data but no longer appear on the list made available by FDEP. Facilities may be removed from the current LST list because the discharge has been cleaned up, or the discharge is not required for 62-770.

Government Publication Date: Mar 23, 2023

Underground Storage Tanks:

UST

List of Underground Storage Tank facilities made available by the Florida Department of Environmental Protection (FL DEP). Includes facilities tracked for active storage tanks, storage tank history, or petroleum cleanup activity. In an effort to minimize the occurrence and environmental risks of releases and discharges, FDEP administers standards pertaining to the construction, installation, operation, maintenance, repair, closure, and disposal of underground storage tank systems that store regulated substances.

Government Publication Date: Feb 13, 2023

Aboveground Storage Tanks:

AST

List of Aboveground Storage Tank facilities made available by the Florida Department of Environmental Protection (FL DEP). Includes facilities tracked for active storage tanks, storage tank history, or petroleum cleanup activity. The Florida Department of Environmental Protection (FDEP) provides standards for aboveground storage tanks (ASTs) that have individual storage tank capacities greater than 550 gallons. The state also regulates the registration, construction, installation, operation, maintenance, repair, closure, and disposal of storage tank systems that store regulated substances.

Government Publication Date: Feb 13, 2023

Storage Tank Facilities:

TANK

List of storage tank facilities made available by the Florida Department of Environmental Protection (FL DEP) for which tank information is not available. In the case of closed facilities - where all tanks have been removed or closed, and there is also no petroleum discharge or on-going cleanup activity - the owner data may not be current, but rather would represent the most recent information made available to FL DEP.

Delisted AST UST Storage Tanks:

[DEL UST AST TANK](#)

This database contains a list of closed UST and AST storage tank sites that were removed from the Florida Department of Environmental Protection (FDEP) storage tank database.

Government Publication Date: Jul 2, 2015

Delisted Storage Tanks:

[DEL STORAGE TANK](#)

List of sites that once appeared on - and have since been removed from - the list of UST and AST storage tank facilities made available by the Florida Department of Environmental Protection.

Government Publication Date: Mar 1, 2023

Federal Facilities Listing:

[FF TANKS](#)

The Florida Department of Environmental Protection (FDEP) Storage Tank Program registers facilities and storage tanks where aboveground or underground storage tanks store pollutants, hazardous substances, and/or mineral acid substances regulated by Chapter 62-761, Florida Administrative Code, or when aboveground storage tanks or compression vessels store a hazardous substance which requires registration according to Chapter 376, Florida Statutes.

Government Publication Date: Mar 1, 2023

Storage Tank/Contaminated Facility Search:

[STCS](#)

List of facilities and tanks in the Florida Department of Environmental Protection (FDEP) Bureau of Petroleum Storage Systems Storage Tank/Contaminated Facility Search which do not currently have active, regulated underground or aboveground storage tanks (USTs or ASTs) containing petroleum. Note that tank details do not appear for facilities for which all tanks have been removed.

Government Publication Date: Nov 21, 2022

Institutional Controls Registry:

[INST](#)

The Institutional Controls registry is maintained by the Florida Department of Environmental Protection (FDEP). The registry aims to help preserve adequate protection of contaminated soil regions and help to minimize any chances of exposure.

Government Publication Date: Feb 21, 2023

Engineering Controls:

[ENG](#)

A listing of all engineering controls that are in place to eliminate or reduce the potential for contaminant migration and exposure to contaminants. These controls may include caps, barriers, guards or fences. The list is maintained by the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Feb 21, 2023

Voluntary Cleanup Sites:

[VCP](#)

A listing of active and closed voluntary cleanup sites registered by the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Jul 1, 2022

Brownfield Sites:

[BROWNFIELDS](#)

Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. This is a list of sites within designated Brownfield Areas within Florida where Brownfield Site Rehabilitation Agreement (BSRA)s have been executed between FDEP and a responsible party.

Government Publication Date: Sep 8, 2021

Brownfield Areas:

[BROWNFIELD AREA](#)

Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. This is a list of Brownfield Areas, defined by the FDEP as contiguous areas of one or more brownfield sites, some of which may not be contaminated, that have been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. Because a variety of sources and methods were used to derive information for this data, locations are approximate.

Government Publication Date: Jun 21, 2022

Hazardous Waste Facility List:

[HAZ WASTE FAC](#)

List of Hazardous Waste Financial Assurance Facilities made available by the Division of Waste Management of the Florida Department of Environmental Protection (FDEP). The FDEP's Hazardous waste financial responsibility requirements exist to ensure that certain hazardous waste facilities and transporters have the financial resources available to provide for closure, postclosure and corrective action requirements and/or pay for bodily injury or property damage that might result from accidents, spills or other unexpected events, known as liabilities. These closure, postclosure, corrective action and liability requirements are called financial assurance.

Government Publication Date: Apr 1, 2023

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands:

[INDIAN LUST](#)

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 4, which includes Florida, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Underground Storage Tanks on Tribal/Indian Lands:

[INDIAN UST](#)

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 4, which includes Florida, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Delisted Tribal Leaking Storage Tanks:

[DELISTED INDIAN LST](#)

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Delisted Tribal Underground Storage Tanks:

[DELISTED INDIAN UST](#)

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

County

No County databases were selected to be included in the search.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Aug 18, 2022

Toxics Release Inventory (TRI) Program:

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites:

[PFAS NPL](#)

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Dec 28, 2022

Federal Agency Locations with Known or Suspected PFAS Detections:

[PFAS FED SITES](#)

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. Sites on this list do not necessarily reflect the source/s of contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Jun 30, 2022

SSEHRI PFAS Contamination Sites:

[PFAS SSEHRI](#)

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations <https://pfasproject.com/pfas-contamination-site-tracker/>

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills:

[ERNS PFAS](#)

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

PFAS NPDES Discharge Monitoring:

[PFAS NPDES](#)

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2023

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory:

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Water Quality:

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities:

[PFAS TSCA](#)

The US Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) requiring facilities that manufacture or import chemical substances to report to EPA. This list is specific to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl substances (PFAS). Data file made available by the EPA and includes CDR/Inventory Update Reporting data from 1998 up to 2020. EPA makes notes the following about these data: this data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Hazardous Materials Information Reporting System:

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Aug 30, 2022

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Jan 25, 2023

State Coalition for Remediation of Drycleaners Listing:

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Dec 11, 2022

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Dec 11, 2022

Formerly Used Defense Sites:

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites:

[FORMER NIKE](#)

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Mar 31, 2021

Material Licensing Tracking System (MLTS):

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

[MINES](#)

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Surface Mining Control and Reclamation Act Sites:

[SMCRA](#)

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System:

[MRDS](#)

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites:

[LM SITES](#)

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Title II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations:

[ALT FUELS](#)

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG) fuel type locations.

Government Publication Date: Jan 3, 2023

Superfunds Consent Decrees:

[CONSENT DECREES](#)

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Jan 11, 2023

Air Facility System:

[AFS](#)

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments:

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers:

PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 3, 2022

State

Priority Ranking List:

PRIORITYCLEAN

The Florida Legislature has established a state-funded program to cleanup properties that are contaminated as a result of the operations of a drycleaning facility or wholesale supply facility (Chapter 376, Florida Statutes). The program is administered by the Florida Department of Environmental Protection (FDEP). The statute was sponsored by the drycleaning industry to address environmental, economic, and liability issues resulting from drycleaning solvent contamination. The program provides limited liability protection to the owner, operator and real property owner of drycleaning or wholesale supply facilities for cleanup of drycleaning solvent contamination if the parties meet the eligibility conditions stated in the law.

Government Publication Date: Mar 7, 2022

Dry Cleaning Facilities:

DRYCLEANERS

A listing of dry cleaning facilities registered with the Florida Department of Environmental Protection (FDEP). The information contains facility identification number, site location information, related party (owner) information, and facility type and status. Data is taken from the Storage Tank & Contamination Monitoring database, the registration repository of dry cleaner facility data.

Government Publication Date: Oct 12, 2022

Delisted Dry Cleaning Facilities:

DELISTED DRYCLEANERS

List of sites removed from the drycleaners database made available by the Florida Department of Environmental Conservation (DEC).

Government Publication Date: Oct 12, 2022

Historical Dry Cleaners:

HISTORICAL DRYC

The Florida Department of Environmental Protection (FDEP) provided this historical database of regulated and non-regulated dry cleaning facilities. These facilities were at one time tracked and registered by the FDEP OCULUS Electronic Document Management System as "drums" in the underground storage tank database.

Government Publication Date: Aug 2, 2013

Oil and Hazardous Materials Incidents:

SPILLS

Statewide listing of oil and hazardous materials spills and incidents recorded by the Florida Department of Environmental Protection (FDEP).

Government Publication Date: Jan 17, 2023

Contaminated Sites:

DWM CONTAM

Florida Department of Environmental Protection (FDEP) Division of Waste Management (DWM) listing of active or known sites that include sites requiring cleanup but are not actively being worked on due to the agency's lack of funding (primarily petroleum and drycleaning).

Government Publication Date: Oct 12, 2022

Delisted Contaminated Sites:

DEL CONTAM SITE

List of sites which were once included on the Florida Department of Environmental Protection (FDEP) Division of Waste Management (DWM)'s Contaminated Sites list. As sites on the Contaminated Sites (CS) list are cleaned up or closed under risk based corrective action, they are removed from the CS list.

Government Publication Date: Sep 30, 2015

Aqueous Film Forming Foam (AFFF):

PFAS AFFF

A list of fire fighter training facilities that use or possibly used Aqueous Film Forming Foam (AFFF). This list is made available by the Florida Department of Environmental Protection (DEP).

PFAS Investigation at Federal Facilities:

PFAS

List of sites - including Federal Facilities - in Florida at which either a) there has been confirmed or suspected usage of Aqueous Film Forming Foam (AFFF), or b) the Division of Waste Management has identified as a potential source or environmental impact related to per- and polyfluoroalkyl substances (PFAS). The Florida Department of Environmental Protection (DEP) is committed to the protection of the groundwater resources of the state and the public health and safety of residents. The DEP will continue its efforts to investigate and understand PFAS in the environment and the ecological and human health risks associated with PFAS contamination. Listings made available by the Florida Department of Environmental Protection (DEP).

Government Publication Date: Feb 22, 2023

Ground Water Contamination Areas:

GW CONTAM

List of areas of known groundwater contamination made available by the Florida Department of Environmental Protection (DEP). 38 counties have been delineated primarily for the agricultural pesticide ethylene dibromide (EDB), and to a much lesser extent, volatile organic and petroleum contaminants. Permitted water wells in these areas must meet specific well construction criteria and water testing prior to well use. This dataset only indicates the presence or absence of specific groundwater contaminants and does not represent all known sources of groundwater contamination in the state of Florida.

Government Publication Date: Jan 18, 2023

Underground Injection Control Wells:

UIC

Class I Underground Injection Control (UIC) wells that are currently or were previously active, as well as proposed sites, regulated by the Florida Department of Environmental Protection (FDEP). Class I UIC wells are used to inject nonhazardous waste, hazardous waste (new hazardous waste wells were banned in 1983), or municipal waste below the lowermost underground source of drinking water.

Government Publication Date: Jan 26, 2023

Well Surveillance Program Facilities:

WELL SURVEILLANCE

List of facilities made available by the Florida Health Well Surveillance group. The Well Surveillance group manages several programs to identify and monitor areas in Florida where contaminated drinking water is suspected and may pose a threat to public health. The section coordinates with the County Health Departments (CHDs) to locate potable wells and conduct water sampling for contaminants of concern. The Well Surveillance Section is composed of the State Underground Petroleum Environmental Response Act (SUPER Act), Drinking Water Toxics Program (Toxics), Drycleaner Solvent Cleanup Program (DSCP). Includes locations of known cattle dipping vats.

Government Publication Date: Jan 30, 2023

Cattle Dip Vats:

CDV SOUTHEAST

A list of Cattle Dip Vats in Southeast Florida made available by the Florida Department of Environmental Protection.

Government Publication Date: Jan 19, 2017

Tier 2 Report:

TIER 2

A list of Tier 2 facilities in the state of Florida. The list tracks the inventory of chemicals within a particular facility. This list is provided by the Florida Division of Emergency Management.

Government Publication Date: Jul 22, 2022

Delisted County Records:

DELISTED COUNTY

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Feb 6, 2023

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

1.0 INTRODUCTION

Apex Companies, LLC (Apex) is pleased to provide this Natural Attenuation Monitoring (NAM) Report for the Fast Track Foods #214 facility located at 1200 East Main Street in Lake Butler, Union County, Florida. All work was performed in conformance with FDEP Quality Assurance Program SOP 001/01, Chapter 62-780, FAC, Section 376.3071, FS, and all applicable County, Water Management District, and state regulations. Additionally, all work was performed in accordance with current Petroleum Restoration Program standard operating procedures and criteria. This NAM Report includes applicable figures, cumulative summary tables, analytical results, chain of custody records, all sampling and field calibration logs, field notes, and recommendations for the project with respect to the data collected during Task 3 of Purchase Order #B4FD5. Please refer to **Table A** for explanation of all acronyms and abbreviations.

2.0 SITE SUMMARY

The subject site is an active gasoline service station. The FDEP Storage Tank Compliance Monitoring (STCM) Report indicates that three (3) underground storage tanks (USTs) containing unleaded gasoline were installed at the site in December 1981. The tanks consisted of one (1) 4,000-gallon UST; one (1) 6,000-gallon UST; and one (1) 10,000-gallon UST. On February 1, 2000, the storage tanks were replaced with one (1) 8,000-gallon and one (1) 12,000-gallon unleaded gasoline USTs.

On May 27, 1992, during a routine compliance inspection by the Union County Health Department, MW-1 was found to contain an organic vapor reading of approximately 1200 ppm. The analytical results of groundwater samples indicated concentrations of benzene at 3400 µg/l; toluene at > 9200 µg/l; and total xylenes at 3100 µg/l. A Discharge Report Form (DRF) was submitted for the June 18, 1992 finding. The site was determined to be eligible for the Florida Petroleum Liability and Restoration Insurance (PLRIP) program with the current site score at 45.

Site assessment was performed through 2013 when a Site Characterization Screening (SCS) Report was submitted. Results from the SCS revealed that soil exceeded the Cleanup Target Level (CTL) for benzo(a)anthracene for leachability. Additionally, the SPLP leachate exceeded the CTL. The groundwater laboratory data indicated that the result for benzene exceeded the GCTL. In 2015, Apex Companies, LLC completed additional soil and groundwater assessment. During that investigation, 15 soil borings were advanced at locations selected by FDEP representatives. In addition, two soil samples, thirteen existing monitoring wells, and the on-site private potable well were sampled for lab analysis. Except from the presence of Benzene in the groundwater

sample collected from well MW-19 at a concentration of 3.6 µg/L, no other soil or groundwater Cleanup Target Level (CTL) exceedances were detected.

In the Supplemental Site Assessment Report completed in November 2016, five soil borings were advanced, OVA field screening was performed, and five soil samples were collected for laboratory analysis. Analytical results of the soil sampling revealed that none of the analyzed samples contained petroleum related constituents above corresponding CTLs. Based upon the results, no additional soil quality related site investigation was deemed necessary.

From December 2016 through September 2017 Apex completed quarterly groundwater sampling of four monitoring wells (MW-12, MW-13, MW-17, and MW-19) for laboratory analysis for benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tert-butyl ether (MTBE), and total recoverable petroleum hydrocarbons (TRPH). In addition, MW-17 and MW-19 were analyzed for polynuclear aromatic hydrocarbons (PAHs).

Laboratory results of the collected groundwater samples indicated that no constituents were detected above the method detection limit (MDL) in monitoring wells MW-12, MW-13, and MW-19. Benzene was found in MW-17 at a concentration of 1.6 ug/L during the December 2016 sampling event and at 31.0 ug/L during the September 2017 sampling event. The groundwater cleanup target level (GCTL) of benzene is 1.0 ug/L as stated in Chapter 62-777, F.A.C.

On August 17, 2018 Apex conducted a groundwater vacuum extraction event of monitoring well MW-17. Approximately 1,500-gallons of water was purged from the well over an eight-hour period to promote the extraction of contaminants from the formation, targeting sorbed residual contaminants within the smear zone. Groundwater samples were collected from wells MW-13 and MW-17 on September 12, 2018, and the associated results indicated that all analytes were below GCTLs for all analytes sampled.

A year of NAM sampling from March 2018 through December 2018 indicated that benzene concentrations fluctuated above and below the respective GCTL at monitor well MW-17. Apex recommended installing a replacement well for MW-17 in hopes that the contamination was trapped in the sand pack of the original well.

On July 17, 2019, MW-17R was installed to a depth of 12-ft bls with 10-ft of screen. On July 24, 2019 MW-17R was sampled and analytical results revealed no analytes detected above the MDL.

The current Scope of Work includes Natural Attenuation Monitoring (NAM) sampling in the replacement monitoring well (MW-17R) for laboratory analysis and depth to water measurements in seven additional existing monitoring wells. The Site Plan is attached (**Figure 1**), and depicts the locations of the monitoring wells.

3.0 GROUNDWATER FLOW DIRECTION

On October 9, 2019 the depth to water was gauged in monitoring wells OW-1, MW-11, MW-13 through MW-16, MW-17R, and MW-18. A sufficient time was allowed to elapse (approximately 15 minutes) after each well cap was removed before the water level was gauged to allow the groundwater to equilibrate with atmospheric conditions. The groundwater elevation in each well was calculated by subtracting the depth to water from the corresponding top of casing elevation at each well location. The measurements for the top of casing elevations, depth to groundwater and groundwater elevations are summarized in **Table 1**. The groundwater table elevations for the shallow aquifer were plotted on **Figure 2**, and the direction of groundwater flow across the property was contoured. The Groundwater Flow Map from October 9, 2019 indicates that flow is generally toward the south.

4.0 GROUNDWATER SAMPLING

On October 9, 2019, an Apex representative collected groundwater samples from monitoring well MW-17R for analysis of BTEX/MTBE. Following calibration of meters and collection of water levels, the monitoring well was sampled using the prescribed methodologies in the FDEP SOP 001- 01. The well was purged using low flow purging methods (less than 1.0 liter per minute) via a variable speed peristaltic pump. Following removal of one well volume, stabilization parameters were measured continuously during purging. Stabilization measurements included temperature, specific conductance, pH, turbidity, and dissolved oxygen. The drawdown of the water table was also monitored continuously during purging. After three consecutive measurements demonstrated groundwater stabilization, the sample was gently decanted into pre-cleaned laboratory supplied glassware, placed in an iced cooler, and transported to a Department of Health certified laboratory for analysis. The Laboratory Analysis Report is in **Appendix A**; the Groundwater Sampling Logs and Instrument Calibration Logs are attached in **Appendix B**; and the field notes are presented in **Appendix C**.

4.1 GROUNDWATER ANALYTICAL RESULTS

Analytical results of the groundwater sample collected from monitoring well MW-17R on October 9, 2019, revealed no analytes detected above the MDLs. Groundwater analytical results are summarized in **Table 2**.

5.0 RESULTS

Apex has completed Task 3 of PO B4FDD5 for Natural Attenuation Monitoring at the Fast Track #214 located at 1200 East Main Street, Lake Butler, Union County, Florida. The Scope of Work included collection of a groundwater sample from MW-17R and depth to water measurements in seven other wells. Results of the October 9, 2019 NAM event revealed no petroleum constituents above MDLs in MW-17R. Groundwater flow direction was found to be toward the south. **Table 1** shows the groundwater elevations and the groundwater flow map is presented in **Figure 2**.

6.0 RECOMMENDATIONS

After review of the sampling results for Task 3, Apex recommends No Further Action for the site. The laboratory analytical data indicated no petroleum constituents in exceedance of any regulatory limit. Of note, in 2015 MW-13 and MW-17 were sampled for NAM parameters. Elevated concentrations of total iron detected in wells MW-13 and MW-17 in 2016 indicated that natural attenuation was occurring at the site.

7.0 PROFESSIONAL CERTIFICATION

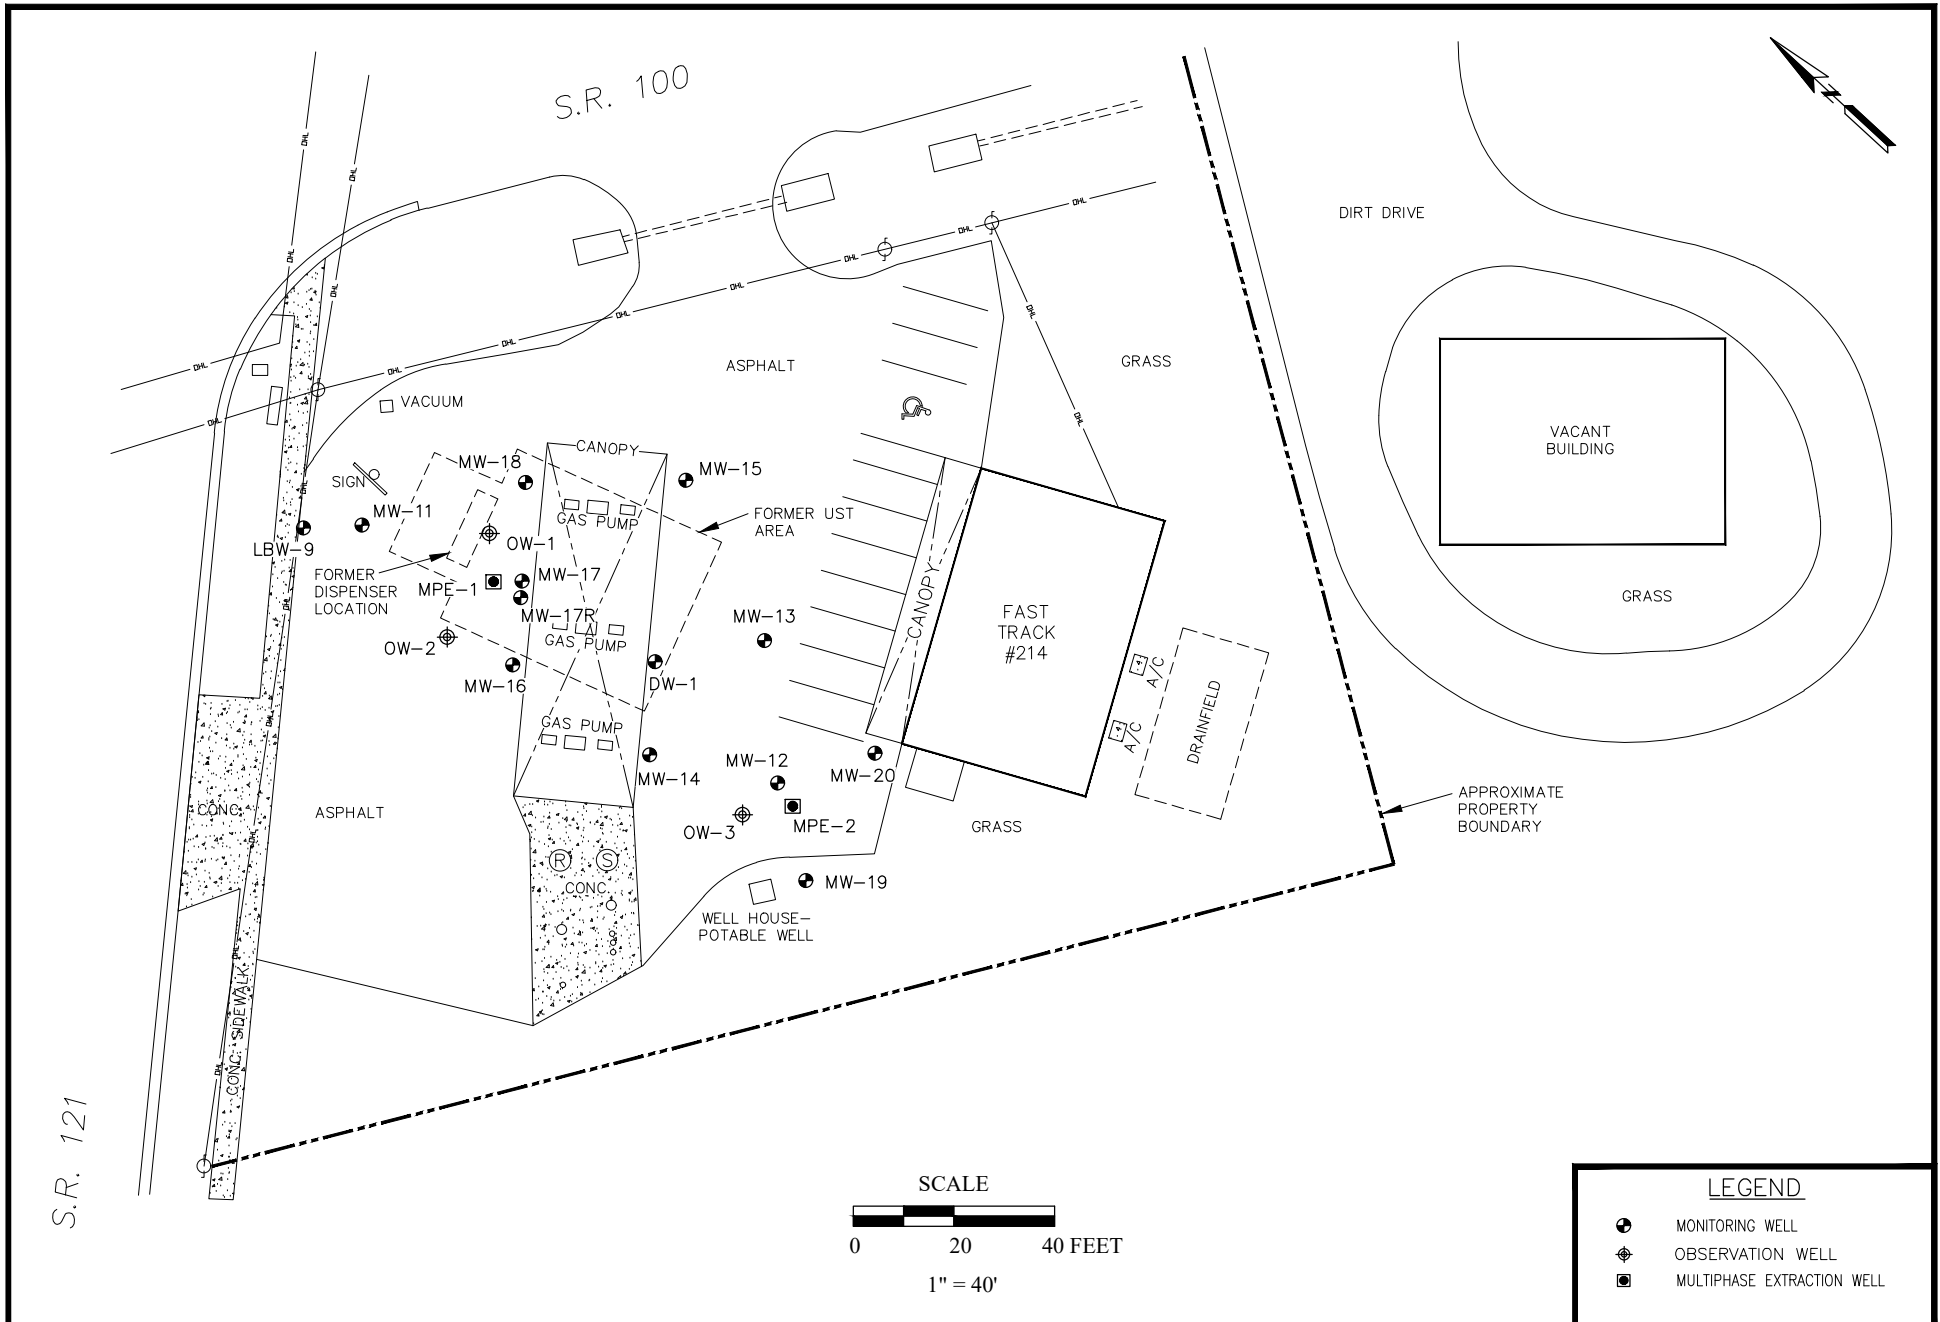

This Natural Attenuation Monitoring Report was prepared by me, or under my direct supervision, and I have found it to conform to currently accepted standard engineering practices pursuant to Chapter 471 of the Florida Statutes and in accordance with Chapter 62-780, F.A.C.

ENVIRONMENTAL LIEN TO 1980 REPORT

Order No: 23041100874

The ERIS Environmental Lien Search Report to 1980 provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- Search for parcel information and / or legal description
- Search for ownership information
- Research official land title documents recorded at jurisdictional agencies such as recorder's office, registries of deeds, county clerks' offices, etc.
- Access copies of deeds to 1980
- Search for environmental encumbrance(s) associated with the deeds
- Provide a copy of any environmental encumbrance(s) based upon a review of keywords in the instrument(s) (title, parties involved and description)
- Provide a copy of the deeds or cite documents reviewed

Thank You for Your Business

Please contact ERIS at **416-510-5204** or **info@erisinfo.com**
with any questions or comments

LIMITATION

This report is neither a guarantee of title, a commitment to insure, or a policy of title insurance. ERIS – Environmental Risk Information Services does not guarantee nor include any warranty of any kind whether expressed or implied, about the validity of all information included in this report since this information is retrieved as it is recorded from various agencies that make it available. The total liability is limited to the fee paid for this report.

WARRANTY DEED

THIS WARRANTY DEED made and executed the 18 day of August, 2022, by LAKE BUTLER DEVELOPMENT CORPORATION, a Florida corporation existing under the laws of Florida, and having its principal place of business at 25 East Main Street, Lake Butler, Florida 32054, hereinafter called the Grantor, to TOMAHAWK LAND II, LLC, a Florida limited liability company, whose mailing address is 14771 SW 58th Drive, Lake Butler, Florida 32054, hereinafter called the Grantee:

WITNESSETH:

That the Grantor, for and in consideration of the sum of TEN AND NO/100 (\$10.00) DOLLARS and other valuable considerations, receipt whereof is hereby acknowledged, by these presents does grant, bargain, sell, alien, remise, release, convey and confirm unto the Grantee, all that certain land situate in Union County, Florida, viz:

SEE SCHEDULE "A" ATTACHED

Tax parcel numbers: 29-05-20-00-000-0390-0 and 32-05-20-00-000-0060-0

This deed is given to and accepted by Grantee subject to all restrictions, reservations, easements, limitations, and mineral rights of record, if any, and all zoning and land use rules, regulations, and ordinances, but this shall not serve to reimpose the same.

TOGETHER WITH all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining.

TO HAVE AND TO HOLD, the same in fee simple forever.

AND the Grantor hereby covenants with said Grantee that the Grantor is lawfully seized of said land in fee simple; that it has good right and lawful authority to sell and convey said land; that it hereby fully warrants the title to said land and will defend the same against the lawful claims of all persons whomsoever; and that said land is free of all encumbrances.

IN WITNESS WHEREOF, the Grantor has caused these presents to be executed in its name, and its corporate seal to be hereunto affixed, by its proper officers thereunto duly authorized, the day and year first above written.

Signed, sealed and delivered

SCHEDULE "A"
ATTACHED TO WARRANTY DEED DATED AUGUST 18, 2022
FROM LAKE BUTLER DEVELOPMENT CORPORATION
TO TOMAHAWK LAND II, LLC

PARCEL 1:

A parcel of land lying, being and situate in the South 1/2 of Section 29, Township 5 South, Range 20 East, City of Lake Butler, Union County, Florida, more particularly described as follows:

COMMENCE at the Northeast corner of the South 1/2 of said Section 29, and run South 85 degrees 49 minutes 47 seconds West, along the North line of said South 1/2 of Section 29, a distance of 1058.92 feet to a nail and disk (labeled: LB6995) set at the intersection with the Westerly right of way line of State Road Number 121 (right of way width varies); thence run South 37 degrees 14 minutes 02 seconds West, along said Westerly right of way line, a distance of 34.68 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection of the apparent Southerly right of way line of NE 107th Terrace (right of way width not known), and at the POINT OF BEGINNING of the hereinafter described parcel of land: Thence continue running South 37 degrees 14 minutes 02 seconds West, continuing along said Westerly right of way line, a distance of 1555.64 feet to a 5/8 inch iron rod (labeled: LB6995) set at a Point of Intersection; thence run South 36 degrees 44 minutes 02 seconds West, continuing along said Westerly right of way line, a distance of 621.31 feet to a 5/8 inch iron rod (labeled: LB6995) set at a Point of Non Tangent Curve to the right; thence run Southwesterly, continuing along said Westerly right of way line, a distance of 555.06 feet as measured along the arc of a curve concave Northwesterly and having a radius of 1876.86 feet, said arc being subtended by a chord having a bearing of South 54 degrees 56 minutes 12 seconds West and a distance of 553.04 feet, to a 5/8 inch iron rod (labeled: LB6995) set at a Point of Tangency; thence run South 63 degrees 24 minutes 32 seconds West, continuing along said Westerly right of way line, a distance of 173.42 feet to a 5/8 inch iron rod (labeled: LB6995) set at a jog widening in said Westerly right of way line; thence run North 26 degrees 35 minutes 28 seconds West, continuing along said Westerly right of way line, along said jog widening, a distance of 17.00 feet to a set 5/8 inch iron rod (labeled: LB6995); thence run South 63 degrees 24 minutes 32 seconds West, continuing along said Westerly right of way line, a distance of 86.04 feet to a 5/8 inch iron rod (labeled: LB6995) set at a Point of Curvature to the right; thence run Southwesterly, continuing along said Westerly right of way line, a distance of 216.40 feet as measured along the arc of a curve concave Northwesterly and having a radius of 553.11 feet, said arc being subtended by a chord having a bearing of South 74 degrees 37 minutes 02 seconds West and a distance of 215.02 feet, to a 5/8 inch iron rod (labeled: LB6995) set at a Point of Tangency; thence run South 85 degrees 49 minutes 32 seconds West, continuing along said Westerly right of way line, a distance of 136.35 feet to a 5/8 inch iron rod (labeled: LB6995) set at a Point of Non Tangent Curve to the left, and at the intersection with the North right of way line of State Road Number 100; thence run Westerly, now along said North right of way line of State Road Number 100, a distance of 241.93 feet as measured along the arc of a curve concave Southerly and having a radius of 2924.79 feet, said arc being subtended by a chord having a bearing of South 88 degrees 11 minutes 43 seconds West and a distance of 241.86 feet, to a 5/8 inch iron rod

(labeled: LB6995) set at a Point of Tangency; thence run South 85 degrees 49 minutes 32 seconds West, continuing along said North right of way line of State Road Number 100, a distance of 75.41 feet to a 1/2 inch iron rod (no identification) found at the Southeast corner of a parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0392-0; thence run North 02 degrees 22 minutes 16 seconds West, along the East line of said Tax Parcel, a distance of 202.29 feet to a 1/2 inch iron rod (no identification) found at the intersection with the South right of way line of Northeast 1st Street (60' right of way); thence run North 85 degrees 36 minutes 47 seconds East, along said South right of way line of Northeast 1st Street, and along the South line of a parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0380-0, a distance of 459.70 feet to a 4 inch square concrete monument (no identification) found at the southeast corner of said Tax Parcel; thence run North 02 degrees 24 minutes 28 seconds West, along the East line of said Tax Parcel ID: 29-05-20-00-000-0380-0, and along its Northerly projection, a distance of 1858.41 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the aforesaid North line of the South 1/2 of Section 29, and at the Northeast corner of a parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0090-0; thence run North 85 degrees 49 minutes 47 seconds East, along said North line of the South 1/2 of Section 29, a distance of 1639.35 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the aforesaid apparent Southerly right of way line of NE 107th Terrace (right of way width not known); thence run South 78 degrees 43 minutes 43 seconds East, along said apparent Southerly right of way line, a distance of 80.43 feet to a set 5/8 inch iron rod (labeled: LB6995); thence run North 85 degrees 52 minutes 39 seconds East, continuing along said apparent Southerly right of way line, a distance of 529.66 feet to a set 5/8 inch iron rod (labeled: LB6995); thence run South 89 degrees 31 minutes 41 seconds East, continuing along said apparent Southerly right of way line, a distance of 51.36 feet to the POINT OF BEGINNING.

AND

PARCEL 2:

Legal "A"

A parcel of land lying, being and situate in the Southwest 1/4 of Southeast 1/4 of Section 29, Township 5 South, Range 20 East, City of Lake Butler, Union County, Florida, more particularly described as follows:

COMMENCE at a 5/8 inch iron rod (labeled: LB6995) found at the Northeast corner of said Southwest 1/4 of Southeast 1/4 of Section 29, for the POINT OF BEGINNING of the hereinafter described parcel of land: Thence run South 01 degree 02 minutes 13 seconds East, along the East line of said Southwest 1/4 of Southeast 1/4 of Section 29, a distance of 1257.16 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the apparent Northerly right of way line of NE 101st Trail (right of way width unknown); thence run South 76 degrees 21 minutes 44 seconds West, along said apparent Northerly right of way line, a distance of 74.18 feet to a set 5/8 inch iron rod (labeled: LB6995); thence run South 85 degrees 25 minutes 48 seconds West, continuing along said apparent Northerly right of way line, a distance of 589.45 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the Northerly right of way line of State Road Number 100; thence run North 59 degrees

34 minutes 58 seconds West, along said Northerly right of way line of State Road Number 100, a distance of 280.90 feet to a Point of Curvature of a curve to the left having a radius of 1697.90 feet; thence run Northwesterly, continuing along said Northerly right of way line of State Road Number 100, a distance of 152.77 feet as measured along the arc of a curve concave Southwesterly and having a radius of 1697.90 feet, said arc being subtended by a chord having a bearing of North 62 degrees 09 minutes 37 seconds West and a distance of 152.72 feet, to a 1/2 inch iron rod (identification unreadable), found at the Southeast corner of that certain parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0391-0, and described in a deed recorded in O. R. Book 311, Page 628, Public Records of Union County, Florida; thence run North 36 degrees 15 minutes 59 seconds East, along the Easterly boundary of said parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0391-0, a distance of 194.46 feet to a 5/8 inch iron rod (labeled: LB6995) set at the Northeast corner of said parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0391-0; thence run North 54 degrees 02 minutes 59 seconds West, along the Northerly boundary of said parcel of land identified as Tax Parcel ID: 29-05-20-00-000-0391-0, a distance of 350.00 feet to a nail and disk (identification unreadable) found at the intersection with the Easterly right of way line of State Road Number 121; thence run North 36 degrees 44 minutes 02 seconds East, along said Easterly right of way line of State Road Number 121, a distance of 872.93 feet to a 5/8 inch iron rod (labeled: LB6995) found at the intersection with the North line of said Southwest 1/4 of Southeast 1/4 of Section 29; thence run North 86 degrees 00 minutes 46 seconds East, along said North line of the Southwest 1/4 of Southeast 1/4 of Section 29, a distance of 662.00 feet to the POINT OF BEGINNING.

AND

Legal "B"

A parcel of land lying, being and situate in the Southwest 1/4 of Southeast 1/4 of Section 29, Township 5 South, Range 20 East, City of Lake Butler, Union County, Florida, more particularly described as follows:

COMMENCE at a 5/8 inch iron rod (labeled: LB6995) found at the Northeast corner of said Southwest 1/4 of Southeast 1/4 of Section 29, and run South 01 degree 02 minutes 13 seconds East, along the East line of said Southwest 1/4 of Southeast 1/4 of Section 29, a distance of 1257.16 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the apparent Northerly right of way line of NE 101st Trail (right of way width unknown); thence continue running South 01 degree 02 minutes 13 seconds East, continuing along said East line of the Southwest 1/4 of Southeast 1/4 of Section 29, a distance of 60.53 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the apparent Southerly right of way line of said NE 101st Trail, and to the POINT OF BEGINNING of the hereinafter described parcel of land: Thence continue running South 01 degree 02 minutes 13 seconds East, continuing along said East line of the Southwest 1/4 of Southeast 1/4 of Section 29, a distance of 12.12 feet to a 5/8 inch iron rod (labeled: LB6995) set at the Southeast corner of said Southwest 1/4 of Southeast 1/4 of Section 29; thence run South 86 degrees 11 minutes 39 seconds West, along the South line of said Section 29, a distance of 582.48 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with the Northerly right of way line of State Road Number 100; thence run North 59 degrees 34 minutes 58 seconds West, along said Northerly

right of way line of State Road Number 100, a distance of 19.72 feet to a 5/8 inch iron rod (labeled: LB6995) set at the intersection with said apparent Southerly right of way line of NE 101st Trail; thence run North 85 degrees 43 minutes 26 seconds East, along said apparent Southerly right of way line, a distance of 482.15 feet to a set 5/8 inch iron rod (labeled: LB6995); thence run North 87 degrees 38 minutes 02 seconds East, continuing along said apparent Southerly right of way line, a distance of 117.27 feet to the POINT OF BEGINNING.

AND

PARCEL 3:

That portion of NE1/4 of NW1/4 lying South of old Starke-Lake Butler public road and North and West of State Road 121, Section 32, Township 5 South, Range 20 East.

RE: CITY DIRECTORY RESEARCH
Tomahawk Parcels 1, 2, and 3
Lake Butler, FL

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

800-1300 of E Main St
10700-10800 of NE 181st Pl
100-300 of NE 9th Avenue
10400-10900 of NE SR 121

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

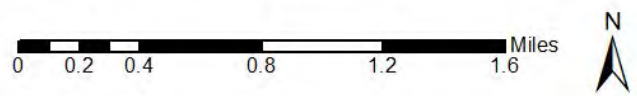

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Hydrologic Information

The Wetland Type map shows wetland existence overlaid on an aerial imagery. The Flood Hazard Zones map shows FEMA flood hazard zones overlaid on an aerial imagery. Relevant FIRM panels and detailed zone information is provided below. For detailed Zone descriptions please click the link: <https://floodadvocate.com/fema-zone-definitions>

Available FIRM Panels in area: 12007C0070E(effective:2012-05-02) 12125C0145D(effective:2009-02-04)
12125C0139E(effective:2018-11-02) 12125C0137E(effective:2018-11-02)
12125C0138E(effective:2018-11-02)

Flood Zone A-01

Zone: A
Zone subtype:

Flood Zone AE-01

Zone: AE
Zone subtype:

Flood Zone X-12

Zone: X
Zone subtype: AREA OF MINIMAL FLOOD HAZARD

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit TQu

Unit Name:	Undifferentiated sediments
Unit Age:	Pliocene/Pleistocene
Primary Rock Type:	sand
Secondary Rock Type:	clay or mud
Unit Description:	Undifferentiated sediments - Undifferentiated Tertiary-Quaternary Sediments - These sediments are siliciclastics that are separated from undifferentiated Quaternary sediments solely on the basis of elevation. Based on the suggestion that the Pleistocene sea levels reached a maximum of approximately 100 feet (30 meters) msl (Colquhoun, 1969), these sediments, which occur above 100 feet (30 meters) msl, are predominantly older than Pleistocene but contain some sediments reworked during the Pleistocene. This unit may include fluvial and aeolian deposits. The undifferentiated Tertiary-Quaternary sediments occur in a band extending from the Georgia-Florida state line in Baker and Columbia Counties southward to Alachua County. These sediments are gray to blue green, unconsolidated to poorly consolidated, fine to coarse grained, clean to clayey, unfossiliferous sands, sandy clays and clays. Organic debris and disseminated organics are present in these sediments. The undifferentiated Tertiary-Quaternary sediments are part of the surficial aquifer system.

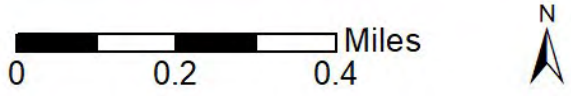

Geologic Unit Thc

Unit Name:	Hawthorn Group, Coosawhatchie Formation
Unit Age:	Miocene
Primary Rock Type:	sand
Secondary Rock Type:	clay or mud
Unit Description:	Coosawhatchie Formation - The Coosawhatchie Formation is exposed or lies beneath a thin overburden on the eastern flank of the Ocala Platform from southern Columbia County to southern Marion County. Within the outcrop region, the Coosawhatchie Formation varies from a light gray to olive gray, poorly consolidated, variably clayey and phosphatic sand with few fossils, to an olive gray, poorly to moderately consolidated, slightly sandy, silty clay with few to no fossils. Occasionally the sands will contain a dolomitic component and, rarely, the dominant lithology will be dolostone or limestone. Silicified nodules are often present in the Coosawhatchie Formation sediments in the outcrop region. The sediment may contain 20 percent or more phosphate (Scott, 1988). Permeability of the Coosawhatchie sediments is generally low, forming part of the intermediate confining unit/aquifer system.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 12 (0.1%)

Map Unit Name:	Sapelo sand
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	31 cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Sapelo(90%)	
horizon A(0cm to 20cm)	Fine sand
horizon E(20cm to 38cm)	Fine sand
horizon Bh(38cm to 74cm)	Fine sand
horizon E'(74cm to 127cm)	Fine sand
horizon Btg(127cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 12 - Sapelo sand

Component: Sapelo (90%)

The Sapelo component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flatwoods on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 12 inches during June, July, August, September. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 4w. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Pelham (4%)

Generated brief soil descriptions are created for major soil components. The Pelham, non-hydric soil is a minor component.

Component: Surrency (3%)

Generated brief soil descriptions are created for major soil components. The Surrency, depressional soil is a minor component.

Component: Starke (3%)

Generated brief soil descriptions are created for major soil components. The Starke soil is a minor component.

Map Unit 14 (1.81%)

Map Unit Name:	Pamlico and Croatan mucks
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Pamlico(50%)	
horizon Oa(0cm to 102cm)	Muck

Soil Information

horizon Cg(102cm to 203cm)	Sand
Croatan(40%)	
horizon Oa(0cm to 58cm)	Muck
horizon C(58cm to 76cm)	Mucky sandy loam
horizon Cg(76cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 14 - Pamlico and Croatan mucks

Component: Pamlico (50%)

The Pamlico component makes up 50 percent of the map unit. Slopes are 0 to 1 percent. This component is on depressions on marine terraces on coastal plains. The parent material consists of herbaceous organic material over sandy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is rarely flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during May, June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 50 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Croatan (40%)

The Croatan component makes up 40 percent of the map unit. Slopes are 0 to 1 percent. This component is on depressions on marine terraces on coastal plains. The parent material consists of organic material over loamy marine or fluvial deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is rarely flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during May, June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 43 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Surrency (10%)

Generated brief soil descriptions are created for major soil components. The Surrency, depressional soil is a minor component.

Map Unit 2 (0.34%)

Map Unit Name:	Albany fine sand, 0 to 5 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	53cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Albany(90%)	
horizon A(0cm to 20cm)	Fine sand
horizon E(20cm to 127cm)	Fine sand
horizon Bt(127cm to 152cm)	Fine sandy loam
horizon Btg(152cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 2 - Albany fine sand, 0 to 5 percent slopes

Component: Albany (90%)

The Albany component makes up 90 percent of the map unit. Slopes are 0 to 5 percent. This component is on ridges on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not

Soil Information

ponded. A seasonal zone of water saturation is at 21 inches during January, February, March, April, May, June, July, August, September, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Blanton (5%)

Generated brief soil descriptions are created for major soil components. The Blanton soil is a minor component.

Component: Hurricane (3%)

Generated brief soil descriptions are created for major soil components. The Hurricane soil is a minor component.

Component: Chipley (2%)

Generated brief soil descriptions are created for major soil components. The Chipley soil is a minor component.

Map Unit 23 (91.37%)

Map Unit Name:	Pelham, Pelham wet, fine sands
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Pelham(52%)

horizon A(0cm to 20cm)	Fine sand
horizon Eg(20cm to 79cm)	Fine sand
horizon Btg1(79cm to 157cm)	Sandy clay loam
horizon Btg2(157cm to 203cm)	Sandy clay

Pelham(39%)

horizon A(0cm to 23cm)	Fine sand
horizon Eg(23cm to 56cm)	Fine sand
horizon Btg1(56cm to 122cm)	Sandy loam
horizon Btg2(122cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 23 - Pelham complex, 0 to 2 percent slopes

Component: Pelham (56%)

The Pelham component makes up 56 percent of the map unit. Slopes are 0 to 2 percent. This component is on flatwoods, lower coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 6 inches during January, February, March, April, May, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3w. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Pelham (38%)

The Pelham, ponded component makes up 38 percent of the map unit. Slopes are 0 to 2 percent. This component is on depressions on lower coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during January, February, March, April, May, November, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Soil Information

Component: Albany (3%)

Generated brief soil descriptions are created for major soil components. The Albany soil is a minor component.

Component: Surrency (3%)

Generated brief soil descriptions are created for major soil components. The Surrency soil is a minor component.

Map Unit 24 (0.06%)

Map Unit Name: Starke mucky fine sand, depressional
Bedrock Depth - Min:
Watertable Depth - Annual Min: 15cm
Drainage Class - Dominant: Very poorly drained
Hydrologic Group - Dominant: A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Starke(90%)	
horizon A1(0cm to 18cm)	Mucky fine sand
horizon A2(18cm to 46cm)	Fine sand
horizon Eg(46cm to 117cm)	Fine sand
horizon Btg(117cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 24 - Starke mucky fine sand, depressional

Component: Starke (90%)

The Starke component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on depressions on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 6 inches during June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 15 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Croatan (4%)

Generated brief soil descriptions are created for major soil components. The Croatan soil is a minor component.

Component: Plummer (3%)

Generated brief soil descriptions are created for major soil components. The Plummer, non-hydric soil is a minor component.

Component: Pamlico (3%)

Generated brief soil descriptions are created for major soil components. The Pamlico soil is a minor component.

Map Unit 28 (0.04%)

Map Unit Name: Arents, moderately wet, 0 to 5 percent slopes
Bedrock Depth - Min:
Watertable Depth - Annual Min: 69cm
Drainage Class - Dominant: Somewhat poorly drained
Hydrologic Group - Dominant: A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Arents(100%)	
horizon C1(0cm to 20cm)	Fine sand
horizon C2(20cm to 36cm)	Fine sand

Soil Information

horizon C3(36cm to 203cm)

Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 28 - Arents, moderately wet, 0 to 5 percent slopes

Component: Arents (100%)

The Arents component makes up 100 percent of the map unit. Slopes are 0 to 5 percent. This component is on fills, flats on marine terraces on coastal plains. The parent material consists of altered marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 27 inches during June, July, August, September. Organic matter content in the surface horizon is about 0 percent. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Map Unit 3 (1.22%)

Map Unit Name: Ocilla fine sand, 0 to 5 percent slopes

Bedrock Depth - Min:

Watertable Depth - Annual Min: 53cm

Drainage Class - Dominant: Somewhat poorly drained

Hydrologic Group - Dominant: B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Ocilla(90%)

horizon A(0cm to 20cm)

Fine sand

horizon E(20cm to 64cm)

Fine sand

horizon Btg(64cm to 203cm)

Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 3 - Ocilla fine sand, 0 to 5 percent slopes

Component: Ocilla (90%)

The Ocilla component makes up 90 percent of the map unit. Slopes are 0 to 5 percent. This component is on rises on marine terraces on coastal plains, knolls on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 21 inches during June, July, August, September, October. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Blanton (4%)

Generated brief soil descriptions are created for major soil components. The Blanton soil is a minor component.

Component: Pelham (3%)

Generated brief soil descriptions are created for major soil components. The Pelham, wet soil is a minor component.

Component: Mascotte (3%)

Generated brief soil descriptions are created for major soil components. The Mascotte soil is a minor component.

Map Unit 35 (0.01%)

Map Unit Name: Wampee loamy fine sand, 5 to 12 percent slopes

Bedrock Depth - Min:

Soil Information

Watertable Depth - Annual Min: 59cm
Drainage Class - Dominant: Somewhat poorly drained
Hydrologic Group - Dominant: B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Wampee(90%)

horizon A(0cm to 15cm)	Loamy fine sand
horizon E(15cm to 74cm)	Loamy fine sand
horizon Btg(74cm to 127cm)	Gravelly sandy clay loam
horizon B/Cg(127cm to 203cm)	Sandy clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 35 - Wampee loamy fine sand, 5 to 12 percent slopes

Component: Wampee (90%)

The Wampee component makes up 90 percent of the map unit. Slopes are 5 to 12 percent. This component is on valley sides on marine terraces on coastal plains, ridges on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 23 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 6s. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Plummer (5%)

Generated brief soil descriptions are created for major soil components. The Plummer, non-hydric soil is a minor component.

Component: Bonneau (5%)

Generated brief soil descriptions are created for major soil components. The Bonneau soil is a minor component.

Map Unit 37 (0.07%)

Map Unit Name: Pamlico and Croatan mucks, frequently flooded
Bedrock Depth - Min:
Watertable Depth - Annual Min: 0cm
Drainage Class - Dominant: Very poorly drained
Hydrologic Group - Dominant: A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Pamlico(53%)

horizon Oa(0cm to 122cm)	Muck
horizon C(122cm to 203cm)	Sand

Croatan(43%)

horizon Oa(0cm to 97cm)	Muck
horizon C(97cm to 122cm)	Mucky sandy loam
horizon Cg(122cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 37 - Pamlico and Croatan mucks, frequently flooded

Component: Pamlico (53%)

The Pamlico component makes up 53 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on marine terraces on coastal plains. The parent material consists of herbaceous organic material over sandy marine deposits. Depth to a root

Soil Information

restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is frequently flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 50 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Croatan (43%)

The Croatan component makes up 43 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on marine terraces on coastal plains. The parent material consists of organic material over loamy marine or fluvial deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is frequently flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 43 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Starke (2%)

Generated brief soil descriptions are created for major soil components. The Starke soil is a minor component.

Component: Surrency (2%)

Generated brief soil descriptions are created for major soil components. The Surrency, flooded soil is a minor component.

Map Unit 4 (0.76%)

Map Unit Name:	Mascotte sand
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	31cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	B/D - These soils have moderately low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Mascotte(90%)

horizon A(0cm to 15cm)	Sand
horizon E(15cm to 48cm)	Sand
horizon Bh(48cm to 69cm)	Sand
horizon E'(69cm to 89cm)	Sand
horizon Btg(89cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 4 - Mascotte sand, 0 to 2 percent slopes

Component: Mascotte (90%)

The Mascotte component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on marine terraces, lower coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 12 inches during January, February, March, April, May, June, July. Organic matter content in the surface horizon is about 5 percent. Nonirrigated land capability classification is 4w. This soil does not meet hydric criteria.

Component: Pelham (4%)

Generated brief soil descriptions are created for major soil components. The Pelham soil is a minor component.

Component: Ocilla (3%)

Generated brief soil descriptions are created for major soil components. The Ocilla soil is a minor component.

Component: Surrency (3%)

Generated brief soil descriptions are created for major soil components. The Surrency soil is a minor component.

Soil Information

Map Unit 6 (0.7%)

Map Unit Name:	Plummer-Plummer wet, sands
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Poorly drained
Hydrologic Group - Dominant:	A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Plummer(58%)	
horizon A(0cm to 23cm)	Sand
horizon Eg(23cm to 155cm)	Sand
horizon Btg(155cm to 203cm)	Sandy clay loam
Plummer(36%)	
horizon A(0cm to 18cm)	Sand
horizon E(18cm to 127cm)	Sand
horizon Btg(127cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 6 - Plummer-Plummer wet, sands

Component: Plummer (58%)

The Plummer, non-hydric component makes up 58 percent of the map unit. Slopes are 0 to 2 percent. This component is on flats on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 12 inches during June, July, August, September. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3w. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Plummer (36%)

The Plummer, wet component makes up 36 percent of the map unit. Slopes are 0 to 2 percent. This component is on drainageways on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during June, July, August, September. Organic matter content in the surface horizon is about 6 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria.

Component: Starke (2%)

Generated brief soil descriptions are created for major soil components. The Starke soil is a minor component.

Component: Albany (2%)

Generated brief soil descriptions are created for major soil components. The Albany soil is a minor component.

Component: Surrency (2%)

Generated brief soil descriptions are created for major soil components. The Surrency, depressional soil is a minor component.

Map Unit 7 (0.96%)

Map Unit Name:	Surrency and Pantego soils, depressional
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Very poorly drained

Soil Information

Hydrologic Group - Dominant:

A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Map Unit: 7 - Surrency and Pantego soils, depressional

Component: Surrency (62%)

The Surrency, depressional component makes up 62 percent of the map unit. Slopes are 0 to 1 percent. This component is on depressions on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 15 percent. Nonirrigated land capability classification is 6w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Pantego (30%)

The Pantego, depressional component makes up 30 percent of the map unit. Slopes are 0 to 1 percent. This component is on depressions on marine terraces on coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during June, July, August, September, October, November. Organic matter content in the surface horizon is about 12 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Croatan (3%)

Generated brief soil descriptions are created for major soil components. The Croatan soil is a minor component.

Component: Pamlico (3%)

Generated brief soil descriptions are created for major soil components. The Pamlico soil is a minor component.

Component: Plummer (2%)

Generated brief soil descriptions are created for major soil components. The Plummer, wet soil is a minor component.

Map Unit 8 (0.27%)

Map Unit Name:

Surrency and Pantego soils, frequently flooded

Bedrock Depth - Min:

Watertable Depth - Annual Min:

15cm

Drainage Class - Dominant:

Very poorly drained

Hydrologic Group - Dominant:

A/D - These soils have low runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Surrency(60%)

horizon A(0cm to 30cm)

Mucky fine sand

horizon Eg(30cm to 81cm)

Fine sand

Soil Information

horizon Btg1(81cm to 170cm)	Sandy loam
horizon Btg2(170cm to 203cm)	Sandy clay loam
Pantego(35%)	
horizon A1(0cm to 25cm)	Mucky loamy sand
horizon A2(25cm to 41cm)	Loamy fine sand
horizon Btg(41cm to 203cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 8 - Surrency and Pantego soils, frequently flooded

Component: Surrency (60%)

The Surrency, flooded component makes up 60 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on marine terraces on coastal plains. The parent material consists of sandy and loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is frequently flooded. It is frequently ponded. A seasonal zone of water saturation is at 6 inches during January, February, March, April, May, June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 15 percent. Nonirrigated land capability classification is 6w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Pantego (35%)

The Pantego component makes up 35 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains on marine terraces on coastal plains. The parent material consists of loamy marine deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is very poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is frequently flooded. It is frequently ponded. A seasonal zone of water saturation is at 6 inches during January, February, March, April, May, June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 12 percent. Nonirrigated land capability classification is 7w. This soil meets hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Croatan (5%)

Generated brief soil descriptions are created for major soil components. The Croatan soil is a minor component.

Map Unit 99 (2.3%)

Map Unit Name: Water

No more attributes available for this map unit

Component Description:

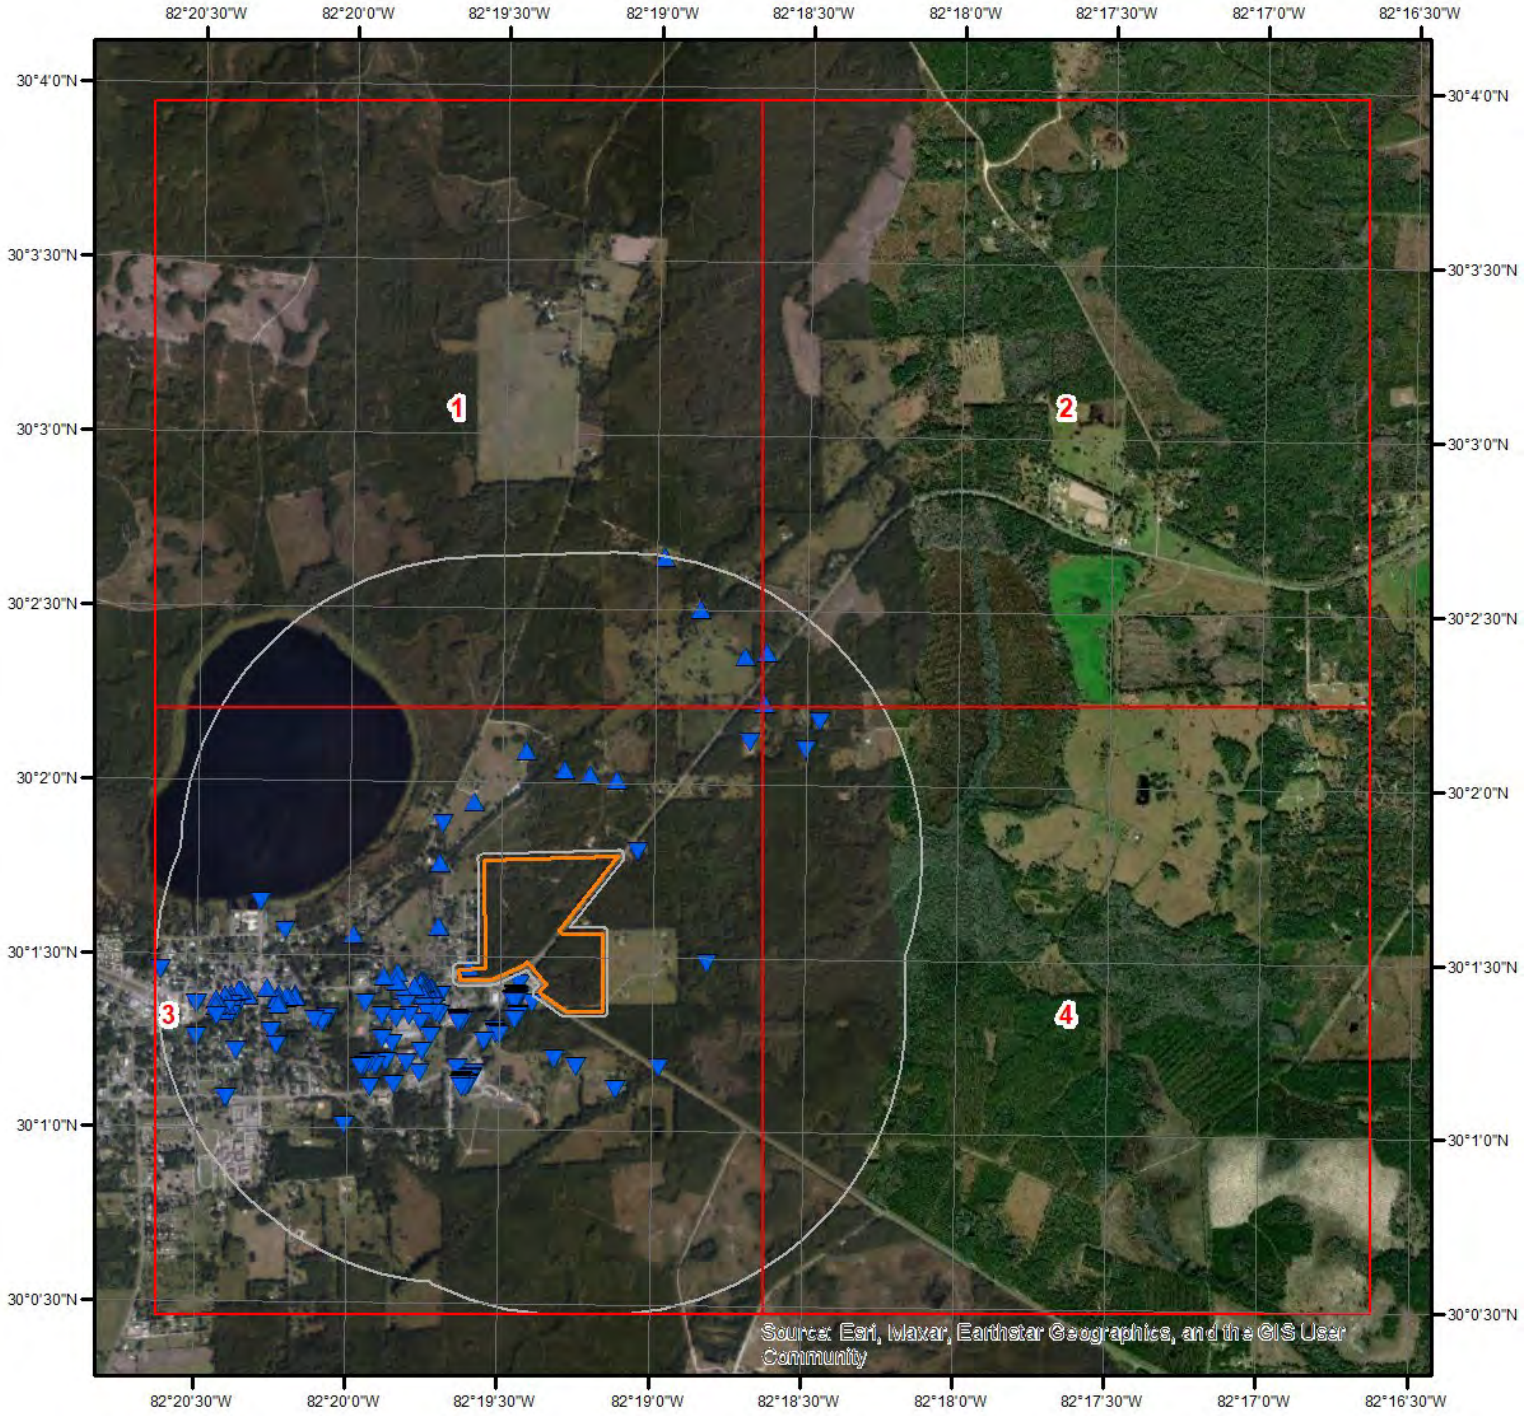

Minor map unit components are excluded from this report.

Map Unit: 99 - Water

Component: Water (100%)

Generated brief soil descriptions are created for major soil components. The Water is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *UNION* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *UNION* County

No Measures/Homes:	18
Arithmetic Mean:	0.7
Standard Deviation:	0.5
Maximum:	1.6
% >4 pCi/L:	-
% >8 pCi/L:	-
% >12 pCi/L:	-
Notes on Data Table:	TABLE 2. Indoor radon results from the Florida population-based radon survey, by county.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS

FED USGS

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well,

Appendix

Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

State Sources

Florida Subsidence Incident Reports

SINKHOLES

A list of Florida Subsidence Incidents made available by the Florida Department of Environmental Protection (DEP) and maintained by the Florida Geological Survey. Sinkholes are closed depressions in areas underlain by soluble rock such as limestone, dolostone, and in some states gypsum and salt. Other subterranean events can cause holes, depressions, or subsidence of the land surface that may mimic sinkhole activity. Commonly, a reported depression is not verified by a licensed professional geologist to be a true sinkhole, and the cause of subsidence is not known. Such an event is called a subsidence incident.

Oil and Gas Wells

OGW

The Oil and Gas Program is the permitting authority within the Florida Department of Environmental Protection's Mining and Minerals Regulation Program. Companies interested in exploration or production of hydrocarbons in Florida are regulated by the Oil and Gas Program. This data is made available by Florida Department of Environmental Protection's Oil and Gas program.

Public Water Supply Wells

PWSW

The Public Water Supply Wells (PWSW) data consist of public water supply facilities and their wells in Florida. This data is made available by Florida Department of Environmental Protection, Water Compliance Assurance Program.

Underground Injection Control Wells

UIC

Class I Underground Injection Control (UIC) wells that are currently or were previously active, as well as proposed sites, regulated by the Florida Department of Environmental Protection (FDEP). Class I UIC wells are used to inject nonhazardous waste, hazardous waste (new hazardous waste wells were banned in 1983), or municipal waste below the lowermost underground source of drinking water.

Water Use Permits Sites - South Florida Water Management District

WELLS

List of Water Use Permitting Facilities consisting of wells, pumps and culverts, made available by the South Florida Water Management District. The facilities represent a subset of all wells, pumps and culverts associated with Water Use Permits. A Water Use Permit is required for all water uses except single family and duplex use and fire fighting.

Water Well Completions - Northwest Florida Water Management District

WATER WELLS

A list of existing well permits provided by the Northwest Florida Water Management District, representing records for wells permitted for construction/repair/abandonment beginning in the year 1976; does not typically contain data on wells constructed prior to 1976. The data provided may therefore only represent a fraction of existing wells. The data are provided by water well contractors on completion reports and, in most cases, has not been verified by District staff.

Water Well Completions - St. Johns River Water Management District

WATER WELLS

A list of wells in the Water Well Completion Report database made available by the St. Johns River Water Management District (SJRWMD). The SJRWMD advises that data reported in the Water Well Completion Report are obtained from multiple sources, including SJRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SJRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Water Well Completions - Suwanee River Water Management District

WELLS

A list of wells in the Water Well Completion Report database made available by the Suwanee River Water Management District department (SRWMD). The SRWMD advises that data reported in the Water Well Completion Report are obtained from multiple sources, including SRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Water Well Construction Permits

WELL CONST PERM

Appendix

A list of water well construction permits issued by the St. Johns River Water Management District (SJRWMD).

Water Well Construction Permits - Southwest Florida Water Management District

WATER WELLS

Locations of well construction sites permitted within the District, including historical sites. A Well Construction Permit is required prior to installation of a water well within the District. The permits ensure that wells are constructed by qualified contractors and meet rigid safety and durability standards.

Water Wells - Suwanee River Water Management District

WATER WELLS

A list of water wells made available by the Suwanee River Water Management District department (SRWMD). The SRWMD advises that data are obtained from multiple sources including SRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Well Surveillance Program Water Wells

WATER WELLS

A list of privately and publicly owned potable wells from the Florida Department of Health's (DOH) Well Surveillance Program.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

APPENDIX G – QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

GREGORY P. STOVER, P.G.
SENIOR TECHNICAL CONSULTANT

Mr. Stover has 41 years of experience as a geologist, and serves as a Senior Technical Consultant with PPM. Mr. Stover declares that to the best of his professional knowledge and belief, he meets the definition of *Environmental Professional* as defined in §3.12.10 of 40 CFR 312, to wit: Mr. Stover earned a Bachelor of Science in Geology from Auburn University in 1979; has held a current Professional Geologist's license from a state since 1989 (Florida, Arkansas, Louisiana, Alabama, and Mississippi); and has 34 years of full-time relevant experience.

Since January 1988, Mr. Stover has performed, managed, supervised, and provided QA/QC reviews for several thousand Phase I and Phase II Environmental Site Assessments (ESA) conducted at a variety of facilities including gasoline stations, auto shops, auto dealerships, soda bottling plants, printers, dry cleaners, indoor and outdoor shooting ranges, paper mills, cotton gins, bulk terminals, oil and gas production fields, wood treatment facilities, asphalt plants, quarries and mines, light and heavy manufacturing factories, railroad terminals, roundhouses, tracks, and spurs, office/warehouses, high-rise office buildings, hotels, hospitals and medical offices, Research & Development facilities, aerospace facilities, former military airfields, private airports, private and public schools, apartment complexes, city-owned housing projects, strip shopping centers and malls, agricultural land, large and small tract timberlands, and EPA-funded brownfields. Mr. Stover has acted as an *Environmental Professional* in the performance of Phase I and II ESAs in 25 states with emphasis on EPA Regions 4 and 6. Mr. Stover has worked for and/or to satisfy the requirements of users, stakeholders, and regulators including owners, purchasers, banks, lawyers, brokers, other consultants, cities, parishes/counties, councils of government, state and local regulatory agencies, HUD, DOE, DOD, SBA, FEMA and the EPA. Mr. Stover applies his expertise in hydrogeology, organic chemistry, and chemical fate and transport to his extensive list of projects involving the assessment and remediation of petroleum products and hazardous substances including gasoline, diesel, bunker oil, polynuclear aromatic compounds, coal tar, heavy metals, PCBs, herbicides, pesticides, and chlorinated solvents.

Mr. Stover has been responsible for developing standard field forms, report formats, and training to support the company-wide use of the ASTM E 1527 Standard Practice for Phase I ESAs and the All Appropriate Inquiry (AAI) Rule since these standards were first published in 1993 and 2005.

Mr. Stover is also proficient with non-ASTM scope items including asbestos-containing building materials, radon, lead-based paint, mold, wetlands, historical resources, and the National Environmental Policy Act (NEPA) of 1969. Mr. Stover also has extensive remediation experience including the use of technologies such as dual-phase vacuum extraction, air sparging, soil vapor extraction, ozone sparging, enhanced bioremediation, excavation, solidification and stabilization, land farming, natural attenuation, and risk assessment.

Kevin P. Grosjean
Staff Geologist

Mr. Grosjean has over 4 years of experience as a geologist, and serves as a Staff Geologist with PPM. Mr. Grosjean declares that to the best of his professional knowledge and belief, he meets the definition of *Environmental Professional* as defined in §3.12.10 of 40 CFR 312, to wit: Mr. Grosjean earned a Bachelor of Arts in Geology from the University of Florida in 2017 and has over 4 years of full-time relevant experience.

Since January 2018, Mr. Grosjean has performed, managed, supervised, and provided QA/QC reviews for several Phase I and Phase II Environmental Site Assessments (ESA) conducted at a variety of facilities including gasoline stations, auto shops, auto dealerships, and EPA-funded brownfields. Mr. Grosjean has acted as an *Environmental Professional* in the performance of Phase I and II ESAs within the state of Florida with emphasis on EPA Region 4. Mr. Grosjean has worked for and/or to satisfy the requirements of users, stakeholders, and regulators including owners, purchasers, banks, lawyers, brokers, other consultants, cities, parishes/counties, councils of government, state and local regulatory agencies, HUD, DOE, DOD, SBA, FEMA and the EPA. Mr. Grosjean applies his expertise in Geology and Environmental Science to his extensive list of projects involving the assessment and remediation of petroleum products and hazardous substances including gasoline, diesel, bunker oil, heavy metals, PCBs, herbicides, pesticides, and chlorinated solvents.

Mr. Grosjean has been responsible for developing standard field forms, report formats, and training to support the company-wide use of the ASTM E 1527 Standard Practice for Phase I ESAs and the All Appropriate Inquiry (AAI) Rule which were first published in 1993 and 2005.

Mr. Grosjean is also proficient with non-ASTM scope items including asbestos-containing building materials, radon, lead-based paint, mold, wetlands, historical resources, and the National Environmental Policy Act (NEPA) of 1969. Mr. Grosjean also has extensive remediation experience including the use of technologies such as dual-phase vacuum extraction, air sparging, soil vapor extraction, ozone sparging, enhanced bioremediation, excavation, and natural attenuation.
